

## *Ixobrychus minutus minutus*

### W Europe, NW Africa/Sub-Saharan Africa

---

<b>Annex I</b>	Yes-HTL
<b>International action plan</b>	No

Common Little Bittern, *Ixobrychus minutus*, is a species of heron found in wetland and river and lake ecosystems.

*Ixobrychus minutus* has a breeding population size of 23900-36900 pairs and a breeding range size of 792000 square kilometres in the EU27. The breeding population trend in the EU27 is Uncertain in the short term and Stable in the long term.

The EU population status for *Ixobrychus minutus* is Unknown, as the data reported were not sufficient to assess the population status of the species.

**This factsheet was produced for *Ixobrychus minutus minutus* [W Europe, NW Africa/Sub-Saharan Africa] population. Also other subspecies/populations of the same species occur within the EU27. The assessment of status at the European level and the introductory text were done at the species level in line with the criteria for assessment of the EU population status.**

***Ixobrychus minutus minutus*** [W Europe, NW Africa/Sub-Saharan Africa]  
 Report under the Article 12 of the Birds Directive

## Assessment of status at the European level

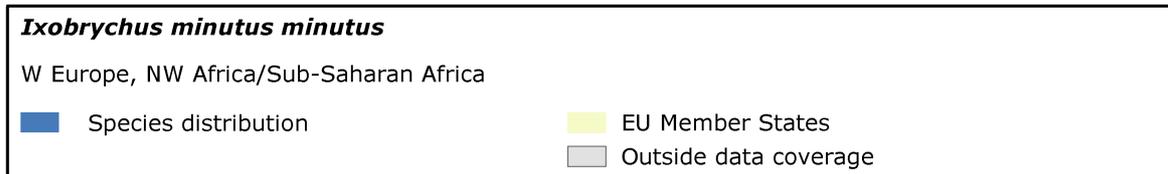

Breeding population size	Breeding population trend		Range area	Breeding range trend		Winter population size	Winter population trend		Population status
	Short term	Long term		Short term	Long term		Short term	Long term	
23900 - 36900 p	u	0	792000						Unknown

See the endnotes for more information<sup>i</sup>

The population status assessment at the EU level was carried out at the species level. The EU status assessment covers following subspecies/populations: *Ixobrychus minutus minutus* [C & E Europe, Black Sea & E Mediterranean/Sub-Saharan Africa], *Ixobrychus minutus minutus* [W Europe, NW Africa/Sub-Saharan Africa] (each of them presented in a separate factsheet).

The EU trends were assessed at the species or subspecies level following BirdLife International's current taxonomy. The EU trends assessment covers more former subspecies or populations: *Ixobrychus minutus minutus* [C & E Europe, Black Sea & E Mediterranean/Sub-Saharan Africa], *Ixobrychus minutus minutus* [W Europe, NW Africa/Sub-Saharan Africa] (each of them presented in a separate factsheet).

 Report under the Article 12 of the Birds Directive

# ***Ixobrychus minutus minutus*** [W Europe, NW Africa/Sub-Saharan Africa] *Report under the Article 12 of the Birds Directive*

*Short-term winter population trend was not reported for this species.*

## Main pressures and threats reported by Member States

For the bird species triggering SPA classification Member States were asked to report the 20 most important pressures and threats using an agreed hierarchical list which can be found on the Article 12 Reference Portal ( [http://bd.eionet.europa.eu/activities/Reporting/Article\\_12/reference\\_portal](http://bd.eionet.europa.eu/activities/Reporting/Article_12/reference_portal) ). Pressures are activities which are currently having an impact on the species and threats are activities expected to have an impact in the near future. The table below only contains information from Member States, where a species triggers SPA classification. Pressures and threats were ranked in three classes 'high, medium and low importance', the table below only shows pressures and threats classed as 'high', for some species there were less than ten pressures and threats reported as highly important.

### Ten most frequently reported 'highly important' pressures and threats

Code	Activity	Frequency
J02	Changes in water bodies conditions	45
M01	Abiotic changes (climate change)	18
A02	Modification of cultivation practices	9
A11	Other agriculture activities	9
G01	Outdoor sports, leisure and recreational activities	9
J03	Other changes to ecosystems	9

## Proportion of population covered by the Natura 2000 network

For the bird species triggering SPA classification Member States were asked to report the size of a species population occurring within the Natura 2000 network. The percentage of species population covered by the network was estimated by comparing the population size within the network and the total population size.

### Percentage of coverage by Natura 2000 sites

MS/territory	season	SPA trigger	% coverage
BE	breeding	YES	82.35
DE	breeding	YES	54.61
ES	breeding	YES	27.16
ESIC	breeding	NO	
FR	breeding	YES	63.6
IT	breeding	YES	40.89
LU	breeding	YES	100
NL	breeding	YES	55
PT	breeding	YES	17.32

See the endnotes for more information<sup>iii</sup>

## Most frequently reported conservation measures

For the bird species triggering SPA classification Member States were asked to report up to 20 conservation measures being implemented for this species using an agreed list which can be found on the Article 12 Reference Portal. Member States were further requested to highlight up to five most important ('highly important') measures; the table below only shows measures classed as 'high', for many species there were less than ten measures reported as highly important.

### Ten most frequently reported 'highly important' conservation measures

Code	Measure	Frequency
4.2	Restoring/improving the hydrological regime	30
6.1	Establish protected areas/sites	20
4.0	Other wetland-related measures	10
4.3	Managing water abstraction	10
6.3	Legal protection of habitats and species	10
4.1	Restoring/improving water quality	5
6.4	Manage landscape features	5
7.1	Regulation/ Management of hunting and taking	5
9.1	Regulating/Management exploitation of natural resources on land	5

This information is derived from the Member State national reports submitted to the European Commission under Article 12 of the Birds Directive in 2013 and covering the period 2008-2012. More detailed information, including the MS reports, is available at:  
<http://bd.eionet.europa.eu/article12/summary?period=1&subject=A617-A> .

## ***Ixobrychus minutus minutus*** [W Europe, NW Africa/Sub-Saharan Africa]

*Report under the Article 12 of the Birds Directive*

<sup>i</sup> **Assessment of status at the European level:** The EU assessments of birds population status was made by the European Red List of Birds Consortium (under contract with the European Commission)

The EU27 population trends were assessed using these categories: '+' Increasing, '0' Stable, 'F' Fluctuating, '-' Decreasing, 'xu' Uncertain and 'x' Unknown. The breeding population size is estimated in majority of the cases as 'p' number of pairs. Alternative population units used are: 'males' number of males, 'i' number of individuals, 'cmales' number of calling males and 'bfem' number of breeding females. The winter population size is estimated as number of individuals.

<sup>ii</sup> **Species trends at the Member State level:** The percentage of the EU27 species population occurring in the Member States (% in EU27) is calculated based on the population size reported by the Member States.

<sup>iii</sup> **Percentage of coverage by Natura 2000 sites:** In some cases the population size within the Natura 2000 network has been estimated using a different methodology to the estimate of overall population size and this can lead to percentage covers greater than 100%. In such case the value has been given as 100% and highlighted with an asterisk (\*). The value 'x' indicates that the Member State has not reported the species population and/or the coverage by Natura 2000. No information is available for Greece and for non-Annex I species in the Czech Republic.
