European Environment Agency European Topic Centre on Biological Diversity

Limosa Iapponica

Annex I Yes International action plan No

Bar-tailed Godwit, *Limosa lapponica*, is a species of wader found in heathland and shrub, wetland, unvegetated or sparsely vegetated land and marine inlet and transitional water ecosystems.

Limosa lapponica has a breeding population size of 2100-3300 pairs and a breeding range size of 29900 square kilometres in the EU27. The breeding population trend in the EU27 is Unknown in the short term and Stable in the long term. *Limosa lapponica* has a winter population size of 108000-158000 individuals in the EU27. The winter population trend in the EU27 is Increasing in the short term and Increasing in the long term.

The EU population status of *Limosa Iapponica* was assessed as Secure, because the species does not meet any of the IUCN Red List criteria for threatened or Near Threatened, or the criteria for Depleted or Declining (the EU27 population or range has not declined by 20% or more since 1980).

Limosa Iapponica

Report under the Article 12 of the Birds Directive

Assessment of status at the European level

Breeding population size	Breeding population trend		Range	Breeding range trend		_ Winter	Winter population trend		_Population
	Short term	Long term	area	Short term	Long term	population size	Short term	Long term	status
2100 - 3300 p	X	0	29900			108000 - 158000 i	+	+	Secure

Main pressures and threats reported by Member States

For the bird species triggering SPA classification Member States were asked to report the 20 most important pressures and threats using an agreed hierarchical list which can be found on the Article 12 Reference Portal (http://bd.eionet.europa.eu/activities/Reporting/Article_12/reference_portal). Pressures are activities which are currently having an impact on the species and threats are activities expected to have an impact in the near future. The table below only contains information from Member States, where a species triggers SPA classification. Pressures and threats were ranked in three classes 'high, medium and low importance', the table below only shows pressures and threats classed as 'high', for some species there were less than ten pressures and threats reported as highly important.

Ten most frequently reported 'highly important' pressures and threats

Code	Activity	Frequency
C01	Mining and quarrying	25
E01	Urbanisation and human habitation	25
E04	Scattered structures and buildings	25
G01	Outdoor sports, leisure and recreational activities	25

Proportion of population covered by the Natura 2000 network

For the bird species triggering SPA classification Member States were asked to report the size of a species population occurring within the Natura 2000 network. The percentage of species population covered by the network was estimated by comparing the population size within the network and the total population size.

Percentage of coverage by Natura 2000 sites

MS/territory	season	SPA trigger	% coverage
BE	winter	NO	
DE	winter	YES	100
DK	winter	NO	
ES	winter	YES	58.26
FI	breeding	NO	
FR	winter	YES	78.29
IE	winter	YES	92.1
NL	winter	YES	100
PT	winter	YES	100
SE	breeding	NO	
UK	winter	YES	87.08

See the endnotes for more informationiii

Most frequently reported conservation measures

Limosa lapponica

Report under the Article 12 of the Birds Directive

For the bird species triggering SPA classification Member States were asked to report up to 20 conservation measures being implemented for this species using an agreed list which can be found on the Article 12 Reference Portal. Member States were further requested to highlight up to five most important ('highly important') measures; the table below only shows measures classed as 'high', for many species there were less than ten measures reported as highly important.

Ten most frequently reported 'highly important' conservation measures

Code	Measure	Frequency
6.1	Establish protected areas/sites	38
6.3	Legal protection of habitats and species	24
4.2	Restoring/improving the hydrological regime	14
4.1	Restoring/improving water quality	5
6.0	Other spatial measures	5
7.1	Regulation/ Management of hunting and taking	5
9.1	Regulating/Management exploitation of natural resources on land	5
9.2	Regulating/Managing exploitation of natural resources on sea	5

This information is derived from the Member State national reports submitted to the European Commission under Article 12 of the Birds Directive in 2013 and covering the period 2008-2012. More detailed information, including the MS reports, is available at: http://bd.eionet.europa.eu/article12/summary?period=1&subject=A157.

Limosa Iapponica

Report under the Article 12 of the Birds Directive

ⁱ Assessment of status at the European level: The EU assessments of birds population status was made by the European Red List of Birds Consortium (under contract with the European Commission)

The EU27 population trends were assessed using these categories: '+' Increasing, '0' Stable, 'F' Fluctuating, '-' Decreasing, 'xu' Uncertain and 'x' Unknown. The breeding population size is estimated in majority of the cases as 'p' number of pairs. Alternative population units used are: 'males' number of males, 'i' number of individuals, 'cmales' number of calling males and 'bfem' number of breeding females. The winter population size is estimated as number of individuals.

ⁱⁱSpecies trends at the Member State level: The percentage of the EU27 species population occurring in the Member States (% in EU27) is calculated based on the population size reported by the Member States.

Percentage of coverage by Natura 2000 sites: In some cases the population size within the Natura 2000 network has been estimated using a different methodology to the estimate of overall population size and this can lead to percentage covers greater than 100%. In such case the value has been given as 100% and highlighted with an asterisk (*). The value 'x' indicates that the Member State has not reported the species population and/or the coverage by Natura 2000. No information is available for Greece and for non-Annex I species in the Czech Republic.
