

## *Porzana porzana*

### Europe/Africa

---

<b>Annex I</b>	Yes
<b>International action plan</b>	No

Spotted Crane, *Porzana porzana*, is a species of rail found in wetland and river and lake ecosystems.

*Porzana porzana* has a breeding population size of 9900-26700 calling males and a breeding range size of 575000 square kilometres in the EU27. The breeding population trend in the EU27 is Stable in the short term and Uncertain in the long term.

The EU population status of *Porzana porzana* was assessed as Secure, because the species does not meet any of the IUCN Red List criteria for threatened or Near Threatened, or the criteria for Depleted or Declining (the EU27 population or range has not declined by 20% or more since 1980).

## Assessment of status at the European level

Breeding population size	Breeding population trend		Range area	Breeding range trend		Winter population size	Winter population trend		Population status
	Short term	Long term		Short term	Long term		Short term	Long term	
9900 - 26700 cmales	0	u	575000						Secure

***Porzana porzana*** [Europe/Africa]  
 Report under the Article 12 of the Birds Directive

*Short-term winter population trend was not reported for this species.*

## Main pressures and threats reported by Member States

For the bird species triggering SPA classification Member States were asked to report the 20 most important pressures and threats using an agreed hierarchical list which can be found on the Article 12 Reference Portal ( [http://bd.eionet.europa.eu/activities/Reporting/Article\\_12/reference\\_portal](http://bd.eionet.europa.eu/activities/Reporting/Article_12/reference_portal) ). Pressures are activities which are currently having an impact on the species and threats are activities expected to have an impact in the near future. The table below only contains information from Member States, where a species triggers SPA classification. Pressures and threats were ranked in three classes 'high, medium and low importance', the table below only shows pressures and threats classed as 'high', for some species there were less than ten pressures and threats reported as highly important.

### Ten most frequently reported 'highly important' pressures and threats

Code	Activity	Frequency
J02	Changes in water bodies conditions	47
K02	Vegetation succession/Biocenotic evolution	11
A02	Modification of cultivation practices	5
A03	Mowing or cutting grasslands	5
A07	Use of 'pesticides' in agriculture	5
F01	Marine and freshwater aquaculture	5
F02	Fishing and harvesting aquatic resources	5
H01	Pollution to surface waters	5
J03	Other changes to ecosystems	5
M01	Abiotic changes (climate change)	5

## Proportion of population covered by the Natura 2000 network

For the bird species triggering SPA classification Member States were asked to report the size of a species population occurring within the Natura 2000 network. The percentage of species population covered by the network was estimated by comparing the population size within the network and the total population size.

### Percentage of coverage by Natura 2000 sites

MS/territory	season	SPA trigger	% coverage
AT	breeding	YES	81.44
BE	breeding	YES	45.83
BG	breeding	YES	23.33
CZ	breeding	YES	75.42
DE	breeding	YES	67.89

***Porzana porzana*** [Europe/Africa]  
Report under the Article 12 of the Birds Directive

<b>MS/territory</b>	<b>season</b>	<b>SPA trigger</b>	<b>% coverage</b>
DK	breeding	YES	44.61
EE	breeding	YES	38.73
ES	breeding	YES	109.43
FI	breeding	YES	17.36
FR	breeding	YES	65.32
HU	breeding	YES	80.79
IT	breeding	YES	77.46
LT	breeding	YES	14.27
LV	breeding	YES	32.41
NL	breeding	YES	71.55
PL	breeding	YES	73.26
RO	breeding	YES	47.79
SE	breeding	YES	36.76
SI	breeding	YES	73.31
SK	breeding	YES	22.36
UK	breeding	YES	13.75

See the endnotes for more information<sup>iii</sup>

## Most frequently reported conservation measures

For the bird species triggering SPA classification Member States were asked to report up to 20 conservation measures being implemented for this species using an agreed list which can be found on the Article 12 Reference Portal. Member States were further requested to highlight up to five most important ('highly important') measures; the table below only shows measures classed as 'high', for many species there were less than ten measures reported as highly important.

### Ten most frequently reported 'highly important' conservation measures

<b>Code</b>	<b>Measure</b>	<b>Frequency</b>
6.1	Establish protected areas/sites	26
4.2	Restoring/improving the hydrological regime	24
6.3	Legal protection of habitats and species	15
2.1	Maintaining grasslands and other open habitats	9
4.0	Other wetland-related measures	9
2.0	Other agriculture-related measures	3
3.0	Other forestry-related measures	3
4.3	Managing water abstraction	3
6.4	Manage landscape features	3
7.1	Regulation/ Management of hunting and taking	3

This information is derived from the Member State national reports submitted to the European

***Porzana porzana*** [Europe/Africa]  
*Report under the Article 12 of the Birds Directive*

Commission under Article 12 of the Birds Directive in 2013 and covering the period 2008-2012.

<http://bd.eionet.europa.eu/article12/summary?period=1&subject=A119> .

***Porzana porzana*** [Europe/Africa]  
*Report under the Article 12 of the Birds Directive*

<sup>i</sup> **Assessment of status at the European level:** The EU assessments of birds population status was made by the European Red List of Birds Consortium (under contract with the European Commission)

The EU27 population trends were assessed using these categories: '+' Increasing, '0' Stable, 'F' Fluctuating, '-' Decreasing, 'xu' Uncertain and 'x' Unknown. The breeding population size is estimated in majority of the cases as 'p' number of pairs. Alternative population units used are: 'males' number of males, 'i' number of individuals, 'cmales' number of calling males and 'bfem' number of breeding females. The winter population size is estimated as number of individuals.

<sup>ii</sup> **Species trends at the Member State level:** The percentage of the EU27 species population occurring in the Member States (% in EU27) is calculated based on the population size reported by the Member States.

<sup>iii</sup> **Percentage of coverage by Natura 2000 sites:** In some cases the population size within the Natura 2000 network has been estimated using a different methodology to the estimate of overall population size and this can lead to percentage covers greater than 100%. In such case the value has been given as 100% and highlighted with an asterisk (\*). The value 'x' indicates that the Member State has not reported the species population and/or the coverage by Natura 2000. No information is available for Greece and for non-Annex I species in the Czech Republic.
