

Habitat code: **7120**
 Habitat name: **Degraded raised bogs still capable of natural regeneration**

Habitat group: **bogs, mires & fens**
 Regions: **ALP ATL BOR CON MAC**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

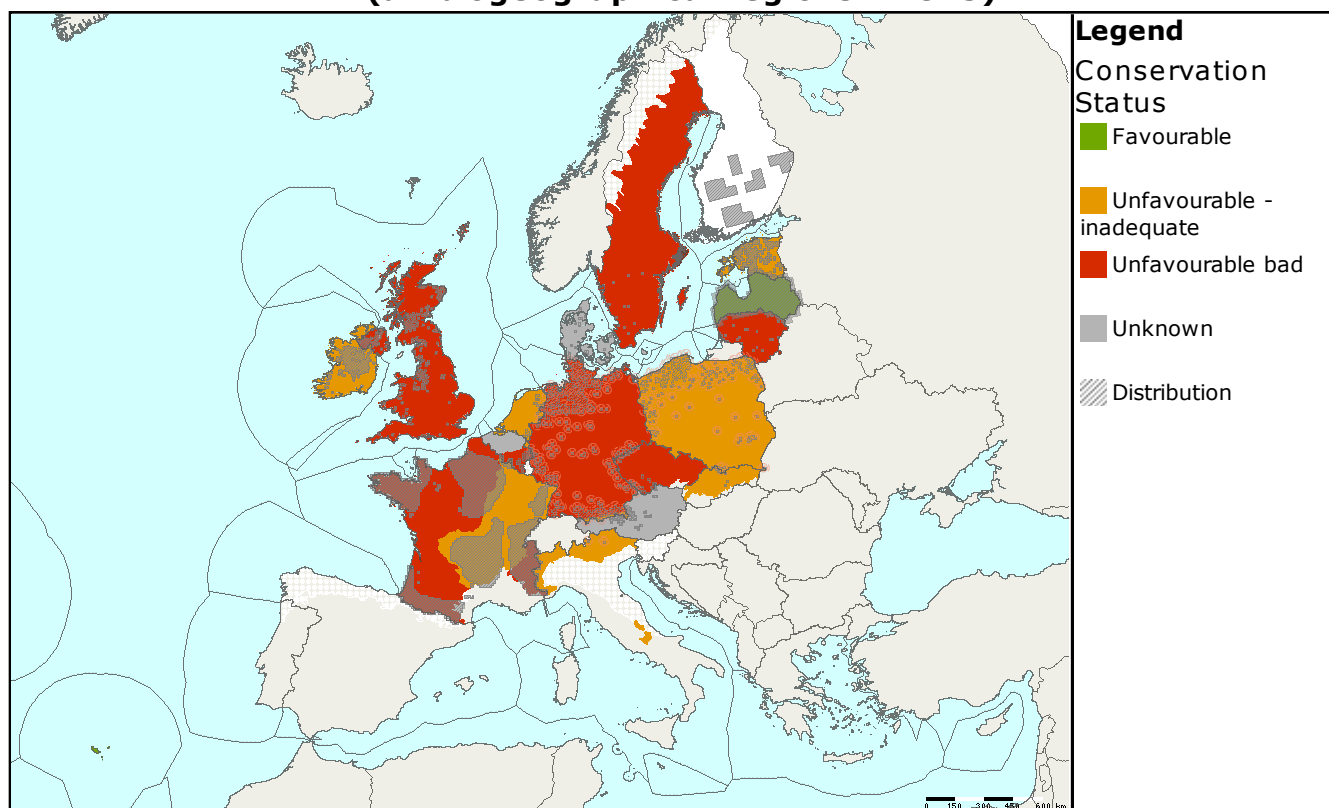

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	ALP						27	
EU25	ATL						1180	x
EU25	BOR						1309	x
EU25	CON						244	
EU25	MAC						132	+

This habitat includes degraded forms of '7110 Active raised bogs' where it is considered that restoration to an active, peat-forming bog is feasible. The habitat is widespread in northern and central Europe. The absence from Spain and Continental Italy is surprising. Unusually for an Annex I habitat, the conservation objective for this habitat is to reduce the area rather than maintain or increase and it would be logical for the Favourable reference area to be 0 km² and as a result the method used for assessing conservation status is not really suited to this habitat. Assessed as 'unfavourable-bad' for the Alpine, Atlantic and Continental regions, 'unfavourable-inadequate' for the Boreal region and 'favourable' for Macaronesia. Latvia (Boreal) and Portugal (Macaronesia) reported this habitat as 'favourable', which is

difficult to understand as neither country reported habitat type 7110 as favourable.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall
