Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	ATL	Green	Orange	Red	Orange	Red	73	-
EU25	BOR	Green	Green	Green	Green	Green	307	=

Vegetated shingle banks occur on the coasts of the Atlantic and Baltic seas. Assessed as 'unfavourable-bad' (although improving) for the Atlantic region due to 'structure and function' in the United Kingdom, although this assessment is sensitive to the weighting used. However it is clearly not favourable. Assessed as 'unfavourable-inadequate' in the Boreal and Continental regions due to 'structure and function' and 'future prospects'. In these regions this is attributed to human impacts including changes in sediment supply. The later may be linked to climate change. In Macaronesia the habitat is considered 'favourable' although it is noted that the habitat is poorly known.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)
