

Habitat code: **1530**
 Habitat name: **Pannonic salt steppes and salt marshes**

Habitat group: **coastal habitats**
 Regions: **CON PAN**

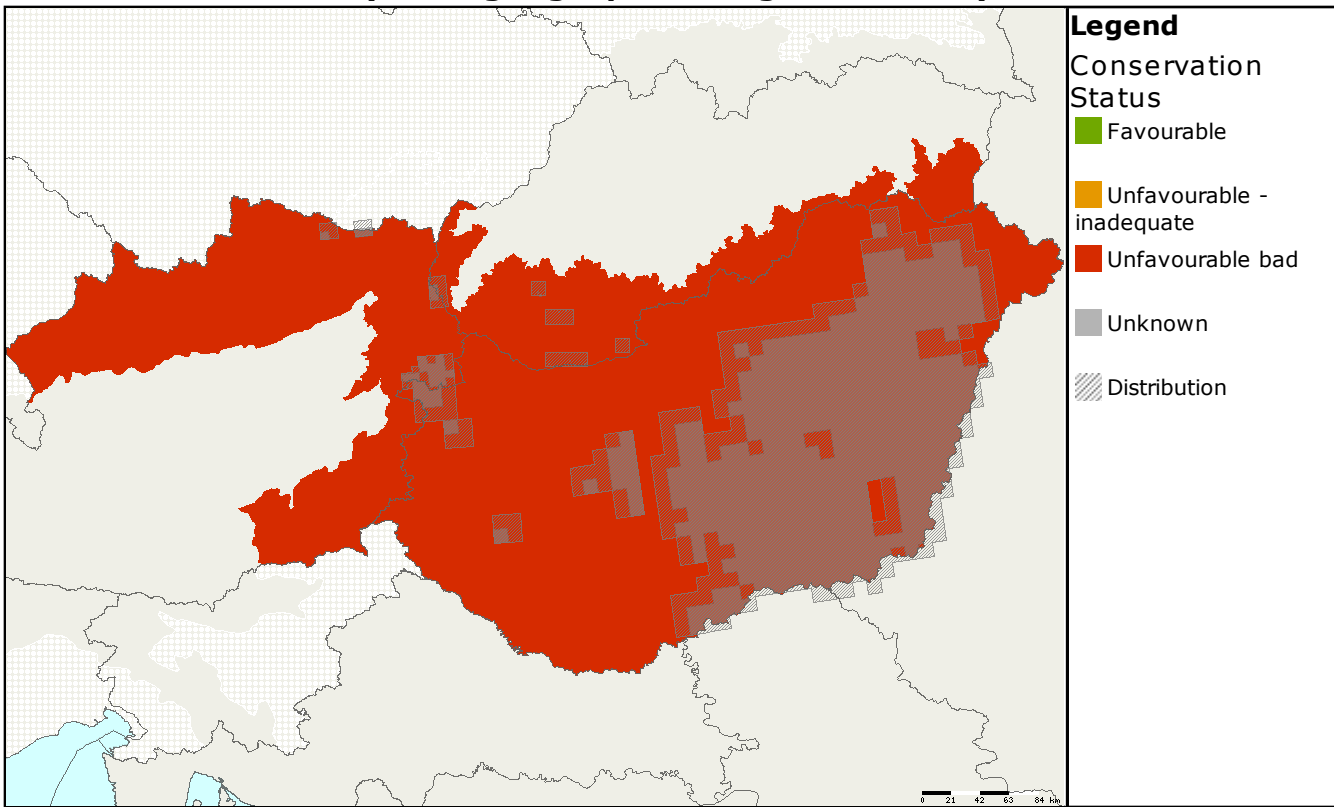

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	CON	Favourable	Unfavourable - inadequate	Unknown	Unfavourable bad	Unfavourable bad	15	-
EU25	PAN	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable bad	Unfavourable bad	Unfavourable bad	2000	-

Salt steppes and marshes typical of the Pannonic region and further east are found in Hungary and Romania within the European Union. They result from hot, dry summers which bring salt to the soil surface. Within the EU25 the habitat is mostly in Hungary, with relatively small areas in Austria (Continental region) and Slovakia. Assessed as 'unfavourable-bad' due to 'structure and function' and 'future prospects' in both regions, as a result of inappropriate agricultural practices.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall			
AT	CON						15	-	2
HU	PAN						2000	-	1
SK	PAN						0.25	-	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
