

Habitat code: **9110**
 Habitat name: **Euro-Siberian steppic woods with Quercus spp.**

Habitat group: **forests**
 Regions: **ALP CON PAN**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

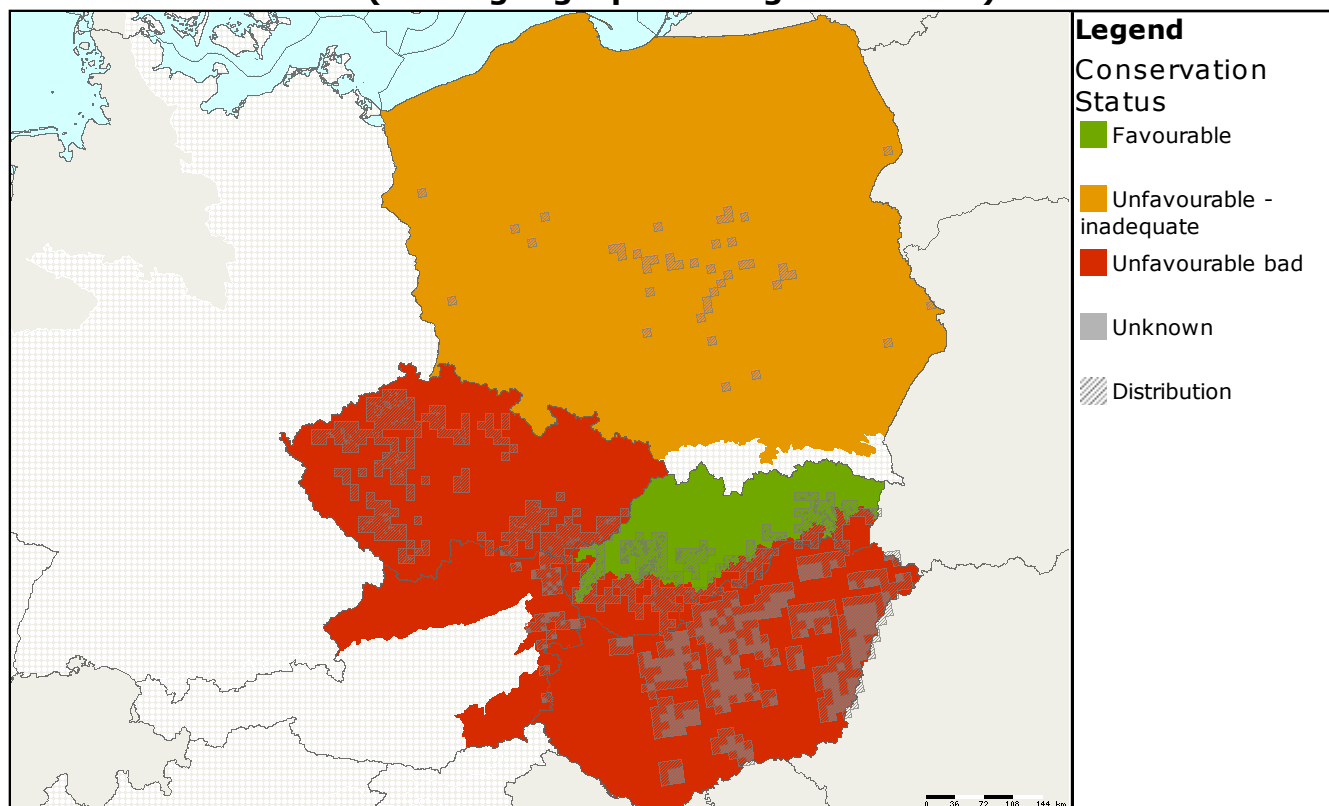

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	ALP	Green	Green	Green	Green	Green	33	=
EU25	CON	Orange	Red	Red	Orange	Red	209	-
EU25	PAN	Red	Red	Red	Red	Red	75	-

Xero-thermophile oak forests (*Quercus* spp) of the Pannonian plain and of plains around the Black Sea. The occurrence of this habitat is linked to the continental climatic conditions, which is particularly evident in the herb layer which contains many continental steppic elements. The habitat occurs on deep soils on deposits of loess.

The conservation status in the Alpine region, where the habitat is present only in Slovakia is 'favourable'. In the Continental and Pannonian regions the status is 'unfavourable-bad'. The habitat area and range are both decreasing and the structures and function are 'bad'. Together with inappropriate forest management the invasion of the alien tree species is one of the major threats to this habitat type.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall			
SK	ALP						32.74	=	2
AT	CON						10	-	2
CZ	CON						49	-	1
PL	CON						150	=	2
CZ	PAN						30	-	1
HU	PAN						35	-	1
SK	PAN						9.92	=	2

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
