

Habitat code: **92B0**
 Habitat name: **Riparian formations on intermittent Mediterranean water courses with *Rhododendron ponticum*, *Salix* and others**

Habitat group: **forests**
 Regions: **MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

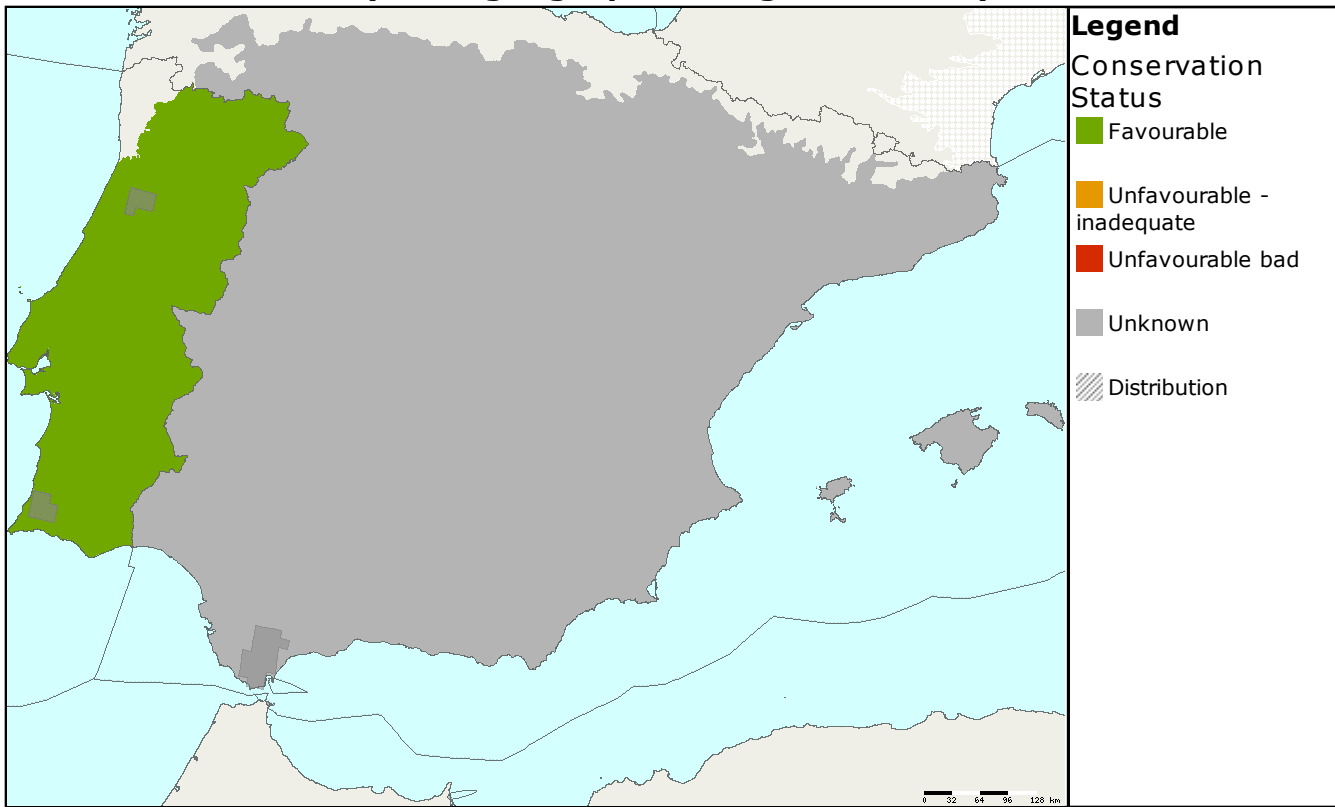

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	MED						>4.81	

Rare and localised alder (*Alnus glutinosa*) woods of deep, steep-sided valleys in the warmer parts of the Iberian Peninsula with rare and endemic species including the shrub *Rhododendron ponticum* ssp *baeticum*. The humidity allows the development of a fern rich community which can include the Annex II and IV tree fern *Culcita macrocarpa*.

The conservation status is 'unknown' due to the very incomplete information received from Spain. However the conservation status is 'favourable' in Portugal and no major threats were reported.

Better information is required, particularly from Spain.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall			
ES	MED						4.81	N/A	2
PT	MED						N/A	=	

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
