Assessments of conservation status at the European level (all biogeographical regions - EU25)

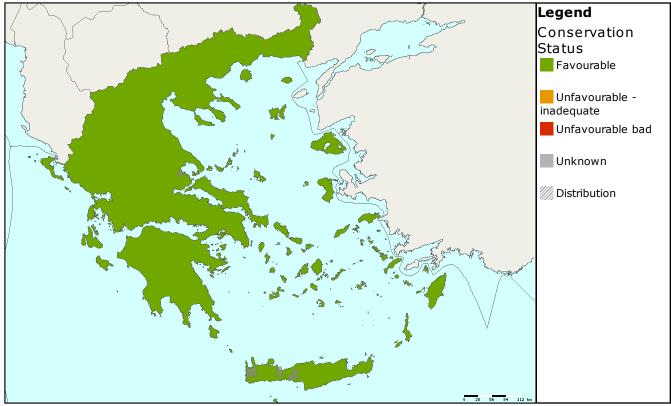

MS	Biogeographic Region	Conservation status assessment						Trand
		Range	Area	Structure & function	Future prospects	Overall	Km <sup>2</sup>	Trend in area
EU25	MED						1.4	=

Rare and localised forests of the deciduous oak *Quercus brachyphylla*, often associated with other oaks such as *Q. macrolepis* or *Q. ilex*. This habitat is restricted to the island of Crete and rarely mainland Greece.

The conservation status of this restricted habitat is favourable and the reported habitat area and range are stable. No major threats were reported.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment						Trand	Data
		Range	Area	Structure & function	Future prospects	Overall	Km²	Trend in area	Data quality
EL	MED						1.4	=	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006.
