

Habitat code: **3160**
 Habitat name: **Natural dystrophic lakes and ponds**

Habitat group: **freshwater habitats**
 Regions: **ALP ATL BOR CON MAC MED PAN**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	ALP	Green	Green	Green	Green	Green	371	
EU25	ATL	Grey	Red	Red	Orange	Red	>155	
EU25	BOR	Green	Green	Orange	Orange	Orange	20500	=
EU25	CON	Orange	Orange	Red	Red	Red	111	-
EU25	MAC	Green	Green	Orange	Green	Orange	67	=
EU25	MED	Grey	Grey	Grey	Grey	Grey	>12	
EU25	PAN	Red	Red	Orange	Red	Red	7.51	-

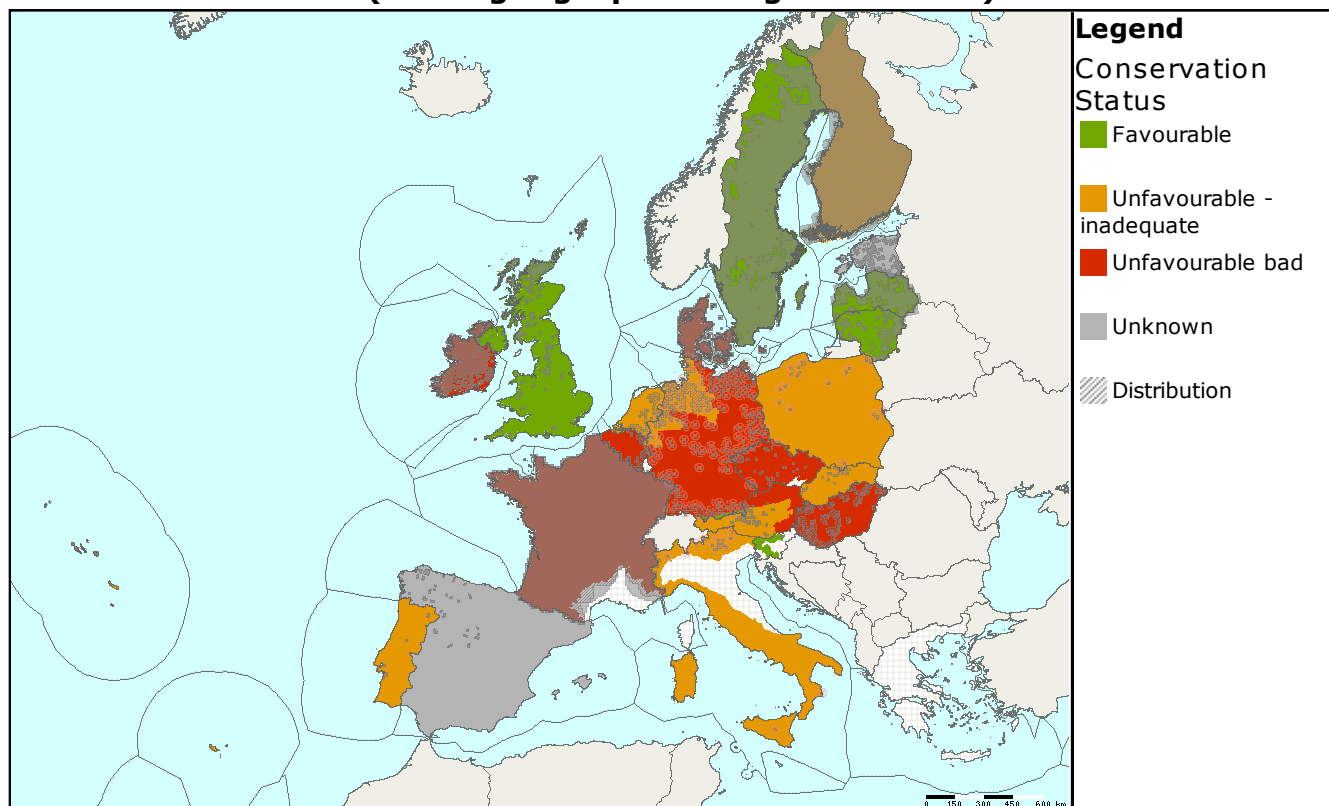

Small lakes where the water is acidic and often tinted brown due to peat are often found as part of peat bogs (for example habitat types 7110 and 7130), particularly in western and northern Europe.

Assessed as 'favourable' for the Alpine region due the very large proportion of the habitat in Finland & Sweden (94%), it is clear that the conservation status is not favourable in other ranges such as the Alps or the Pyrenees.

Elsewhere the habitat is assessed as 'unfavourable-inadequate' (Boreal, Macaronesia), 'unfavourable-bad' (Atlantic, Continental and Pannonic) with 'unknown but not favourable' in the Mediterranean. This reflects the generally unfavourable conservation

status of bog habitats, often linked to drainage and pollution. Italy and Spain in particular reported all or several parameters as unknown and better information is required

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
