

Habitat code: **4040**
 Habitat name: **Dry Atlantic coastal heaths with *Erica vagans***

Habitat group: **heath & scrub**
 Regions: **ATL**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

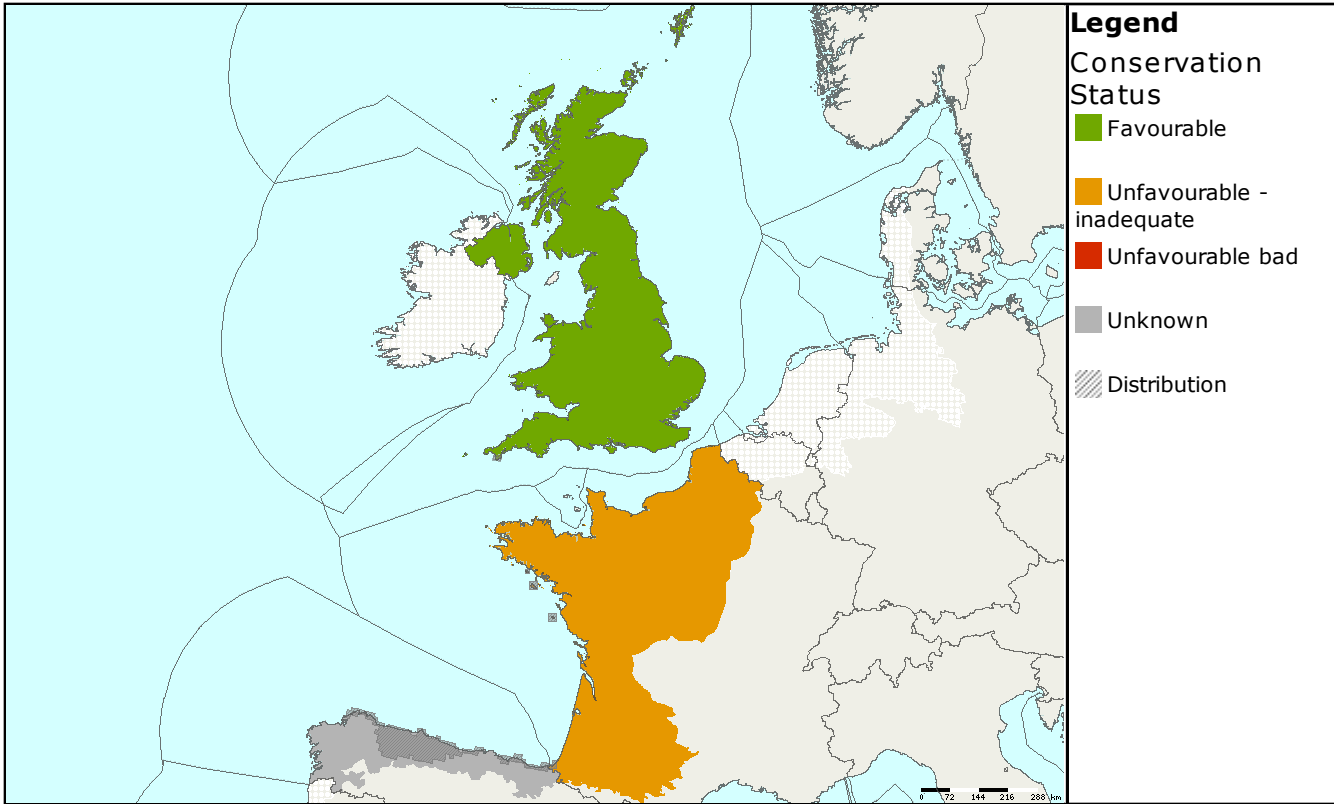

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	ATL						>16	x

Heaths with Cornish heath (*Erica vagans*) occur along the Atlantic coast of northern Spain and rarely in western France and south west England. This habitat is a priority subtype of habitat type 4030.

Assessed as 'unknown' as Spain, which has some 90% of the habitat area reported all parameters as 'unknown'. Reported as 'unfavourable-inadequate' by France and 'favourable' by the United Kingdom where this habitat is restricted to a single locality. Better information required from Spain.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall			
ES	ATL						N/A	N/A	
FR	ATL						10	-	2
UK	ATL						5.99	X	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
