

Habitat code: **8140**
 Habitat name: **Eastern Mediterranean screes**

Habitat group: **rocky habitats**
 Regions: **MED**

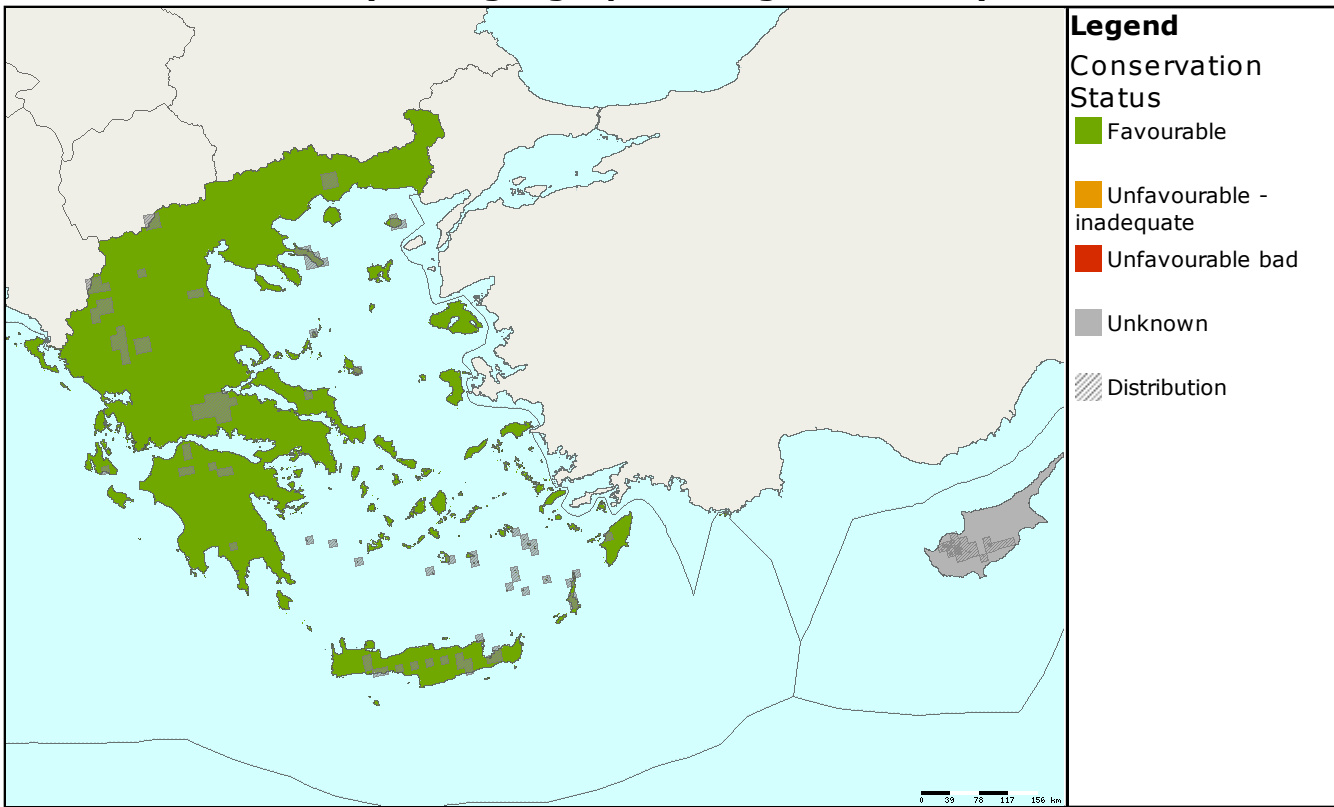

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area
		Range	Area	Structure & function	Future prospects	Overall		
EU25	MED						117	

Limestone and Serpentine screes in Greece and Cyprus, particularly in the mountains. Assessed as 'favourable' although Cyprus reported all parameters as 'unknown' and Greece reported 'future prospects' as 'unknown'. The Cypriot NGOs note continued habitat destruction which would indicate unknown but not favourable for Cyprus although given the small proportion of this habitat in Cyprus compared to Greece the regional assessment would not change. Better information required, particularly from Cyprus.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Biogeographic Region	Conservation status assessment					Km ²	Trend in area	Data quality
		Range	Area	Structure & function	Future prospects	Overall			
CY	MED						0.25	X	2
EL	MED						116.3	=	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
