

Species name: **Algyroides fitzingeri**  
Annex: **IV**

Species group: **Amphibians & Reptiles**  
Regions: **MED**

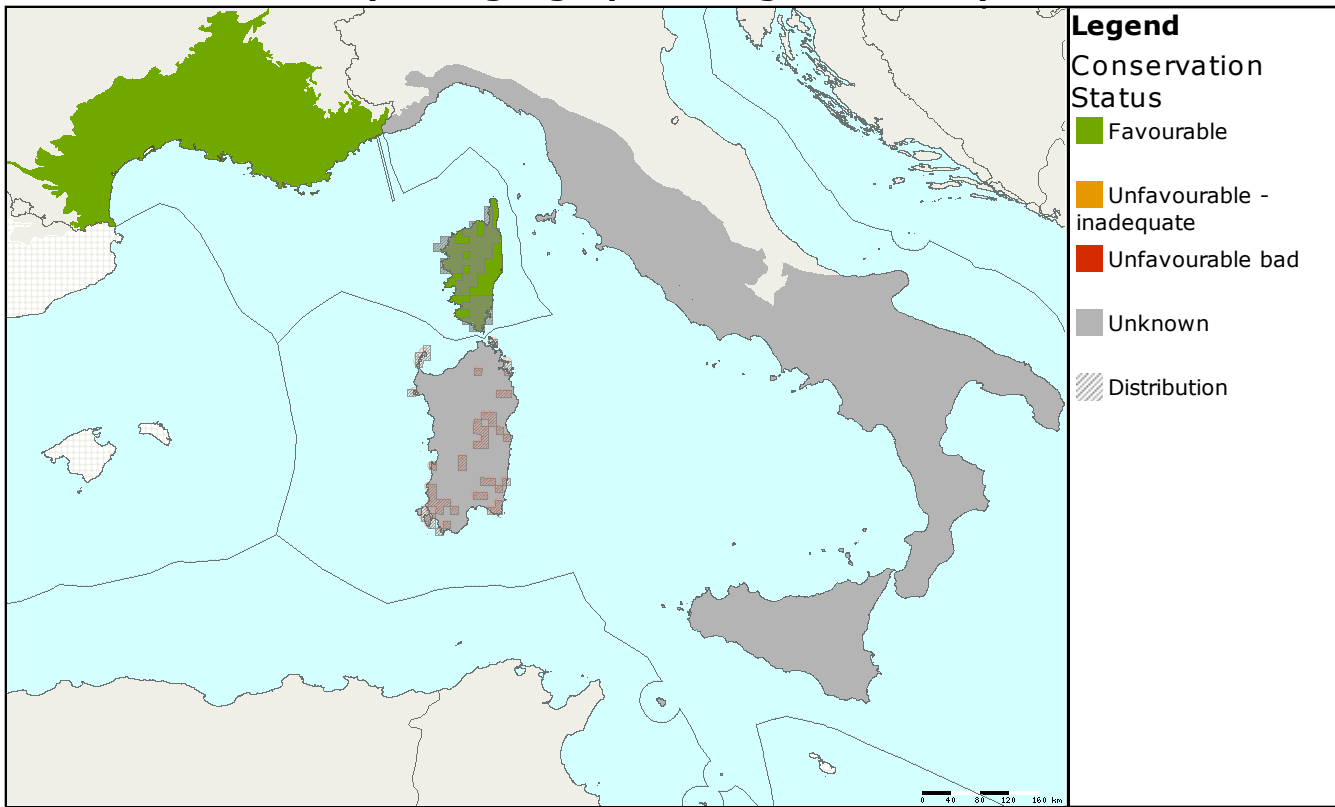

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED						108 grids	

The pigmy lizard is endemic to the Mediterranean islands of Corsica (France) and Sardinia (Italy) and some surrounding islets. The overall assessment is influenced by Italian report with all the parameters reported as 'unknown' or 'not available'. Overall assessment is also 'unknown' in spite 'favourable' French report. More information is needed for next report! In IUCN Red List species is listed as 'least concern'.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FR	MED						90 - 90 loc.	=	3
IT	MED						48 - 73 grids	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
