

Species name: **Alytes cisternasii**  
Annex: **IV**

Species group: **Amphibians & Reptiles**  
Regions: **MED**

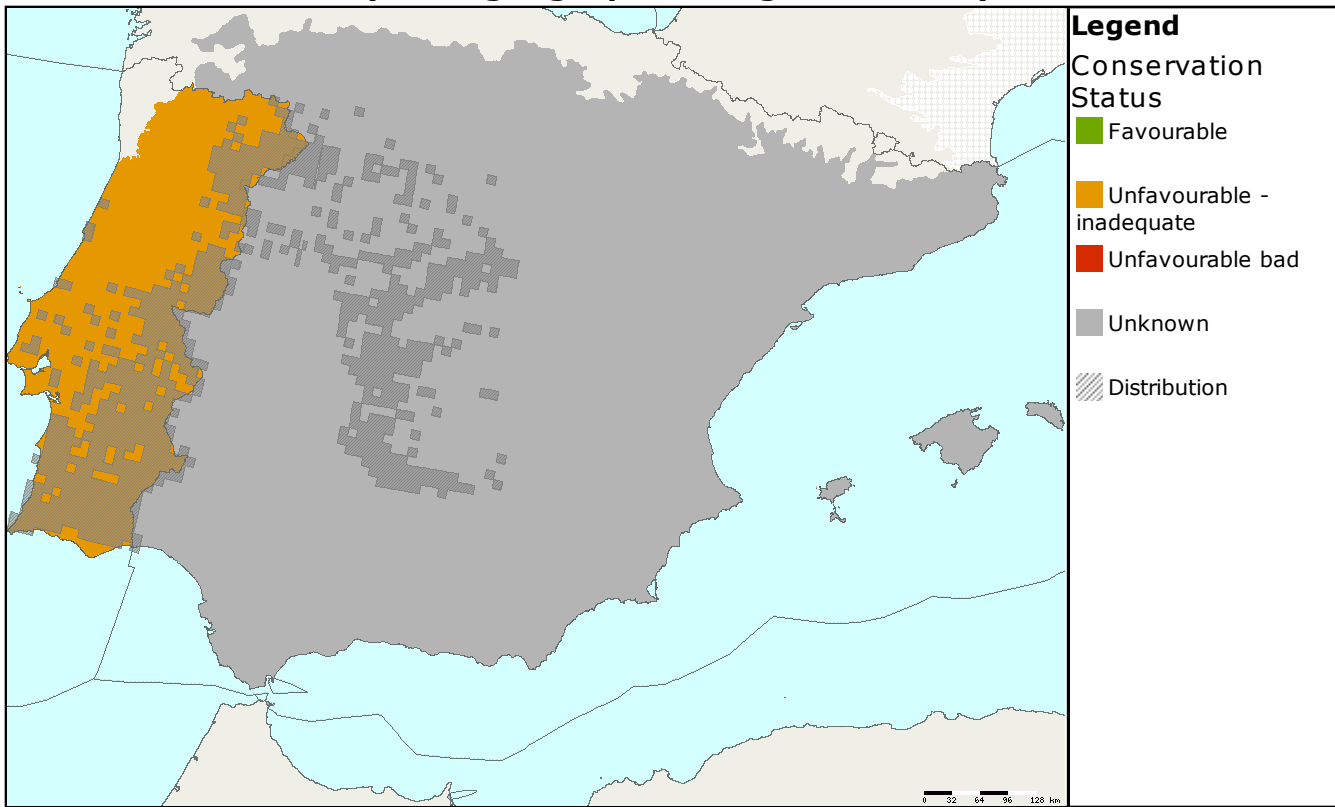

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED						717 grids	

The Iberian midwife toad is species restricted to southern and eastern Portugal and western and central Spain. It is closely associated with meadows and open oak (*Quercus*) forests, most often in sandy areas. The greatest occurrence of species is recorded from Portugal with good future prospects. Overall assessment is 'unknown but not favourable'. Species is assessed as 'nearly threatened' in the IUCN Red List due to a significant decline.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	MED						273 - 290 loc.	N/A	
PT	MED						100000 - (100000) indiv.	X	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
