Species group: **Amphibians & Reptiles**
Regions: **MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

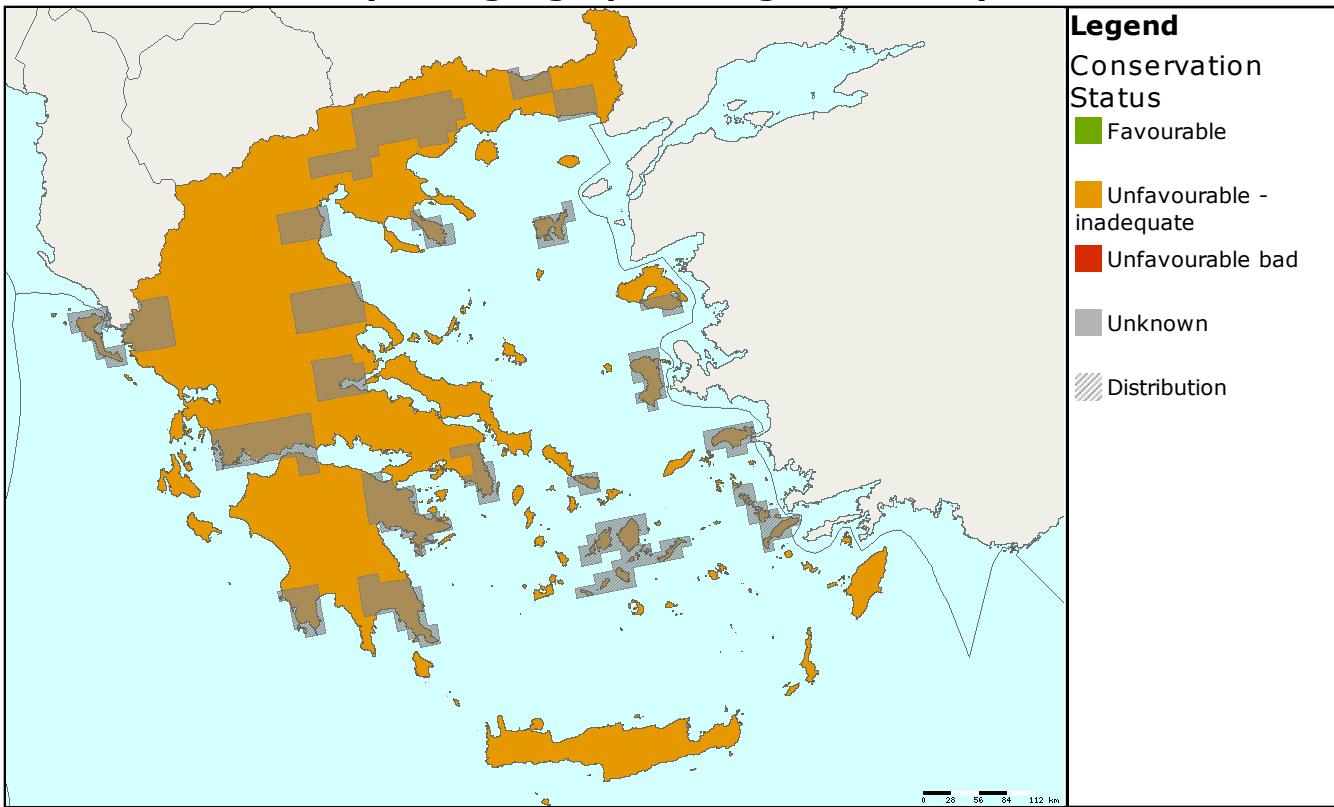

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED							X

The javelin sand boa is a snake species ranging from the North Africa, through the Balkan Peninsula, Asia Minor to the Caucasus region. Within EU it is also known from Romania and Bulgaria. It inhabits rocks, sand dunes, rocky or sandy hillsides and other dry and warm habitats with open vegetation.

It was only reported from the Mediterranean biogeographical region. The conservation status is assessed as unfavourable-inadequate because future prospects are poor, other parameters are unknown. Better information is required.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
EL	MED						433 - (433) grids	X	3

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
