Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED						154 loc.	=

The Corsican brook salamander is endemic to Corsica, France. It inhabits small mountain rivers and lakes with clear water and surrounding riverine shrub and woodlands. It occurs only in the Mediterranean biogeographical region. The conservation status is 'favourable'. This within its limited natural range relatively common species is not considered particularly endangered in France and its populations are abundant and stable.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FR	MED						154 - 154 loc.	=	2

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
