

Species name: **Lacerta oertzeni (previously part of L. danfordi)** Species group: **Amphibians & Reptiles**
 Annex: **IV** Regions: **MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED							X

A lizard species, which is relatively common in Turkey and on western Aegean Greek islands. It inhabits rocky slopes with open Mediterranean forests, grasslands or orchards.

It occurs only in the Mediterranean biogeographical region where the conservation status is 'unknown'. This insufficiently known species is considered to be declining on the island of Rhodes, but on the other hand it is relatively abundant in other islands. Better information is required.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
EL	MED						31 - 31 grids	X	3

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
