

Species name: **Phyllodactylus europaeus**
Annex: **II, IV**

Species group: **Amphibians & Reptiles**
Regions: **MED**

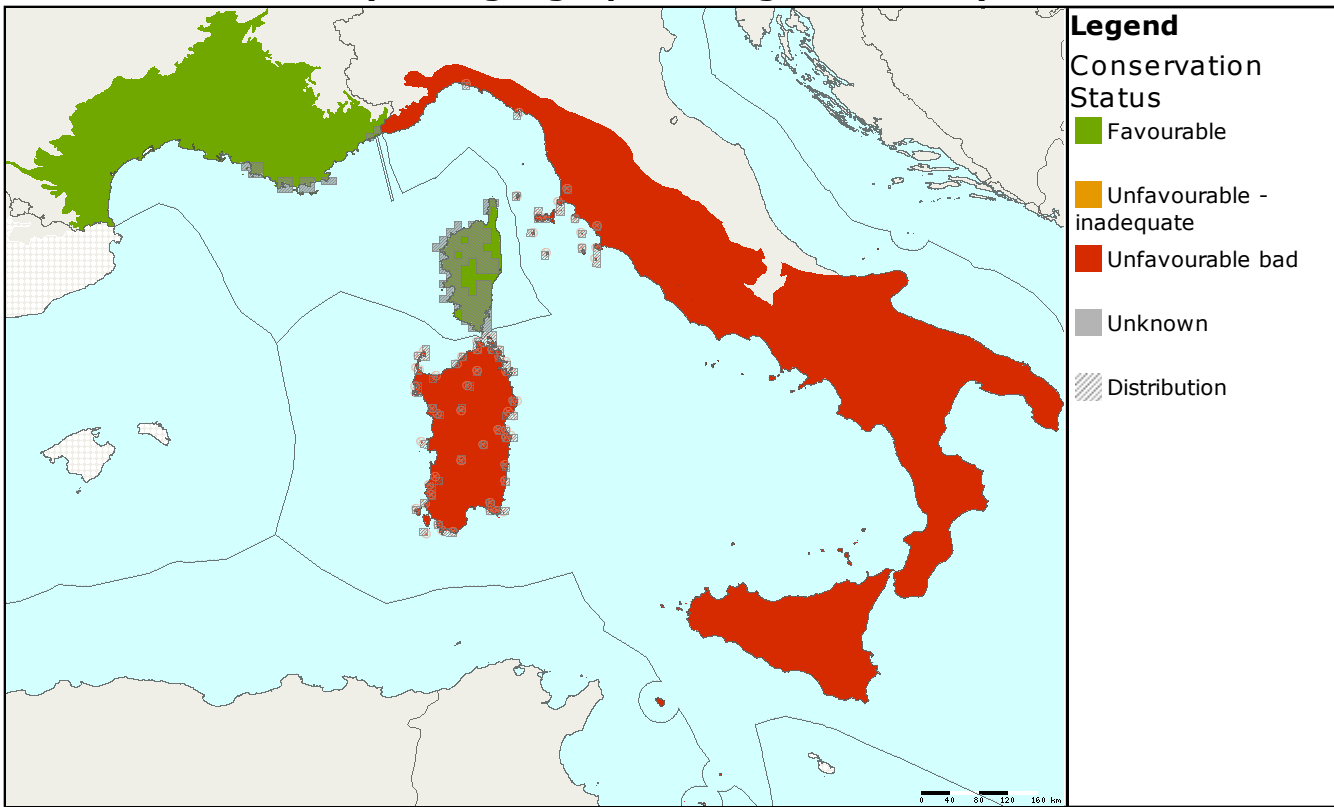

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED						165 grids	

The European leaf-toed gecko is a species that occurs in the Mediterranean region in Corsica (France) and Sardinia (Italy) together with nearby regions in mainland in Italy and France. This species is generally found in rocky areas, such as cliffs, boulders and stone walls in agricultural land. The species overall status of conservation is "unfavourable-bad" because of the negative assessment for habitat and future prospects parameters reported by Italy. All individual parameters are reported as "favourable" by France. The species is listed as "Near Threatened" by IUCN because its extent of occurrence is probably less than 20,000 km².

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FR	MED						200 - 200 loc.	=	2
IT	MED						71 - 89 grids	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
