

Species name: **Rana graeca**
Annex: **IV**

Species group: **Amphibians & Reptiles**
Regions: **MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

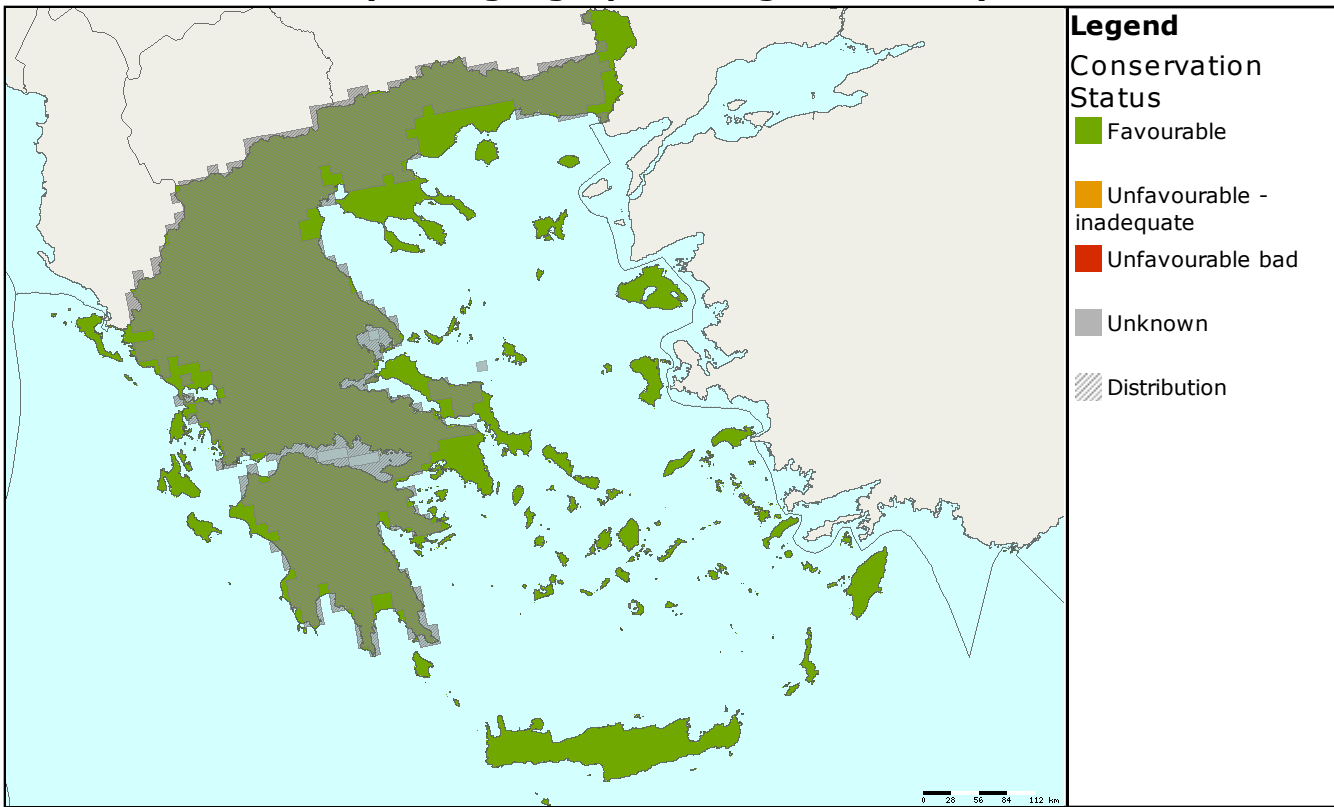

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED							=

The Greek Stream Frog is wide spread, and locally relatively abundant, throughout the Balkan Peninsula. It is mainly an aquatic species, occurring in mountains often in small rivers and streams in forested areas.

It was only reported in the Mediterranean biogeographical region. The conservation status is 'favourable', range and population size are stable and no major threats were recorded.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
EL	MED						909 - 909 grids	=	3

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
