

Species name: **Rana italica**  
Annex: **IV**

Species group: **Amphibians & Reptiles**  
Regions: **ALP CON MED**

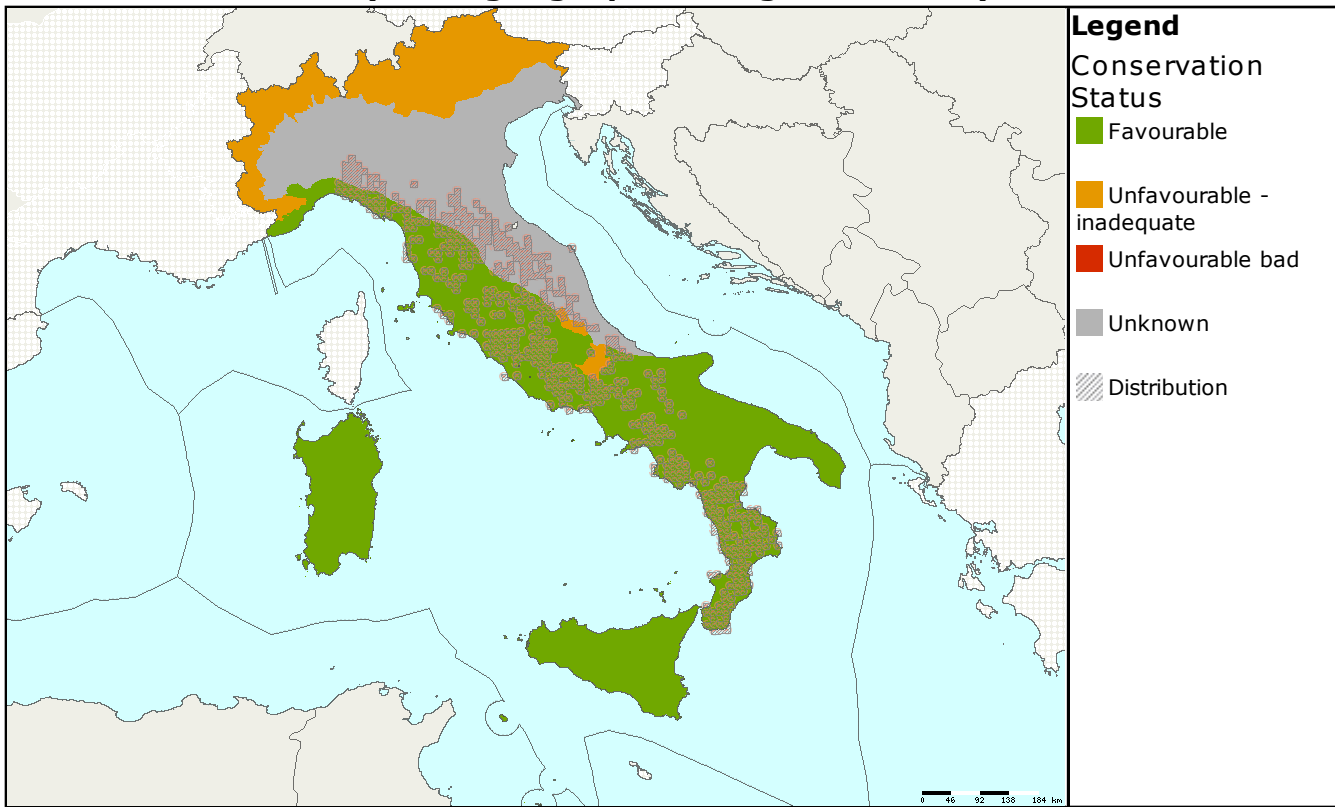

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP	Unfavourable - inadequate	Unfavourable - inadequate	Unknown	Unfavourable - inadequate	Unfavourable - inadequate		X
EU25	CON	Unknown	Favourable	Unknown	Unknown	Unknown		=
EU25	MED	Favourable	Favourable	Unknown	Favourable	Favourable		=

The Italian stream frog is an endemic species to the Apennine Mountains and other hilly areas of Italy south of the Po Valley. The species is only reported by Italy. For the Alpine region its status of conservation is "unfavourable-inadequate"; for the continental region the overall assessment is "unknown" and "favourable" for the Mediterranean region. Many individual parameters are reported as "unknown" showing better information is required for the species. Listed as "Least Concern" by IUCN in view of its wide distribution.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
IT	ALP						6 - 8 grids	X	3
IT	CON						134 - 148 grids	=	2
IT	MED						358 - 391 grids	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
