

Species name: **Salamandra lanzai**
Annex: **IV**

Species group: **Amphibians & Reptiles**
Regions: **ALP**

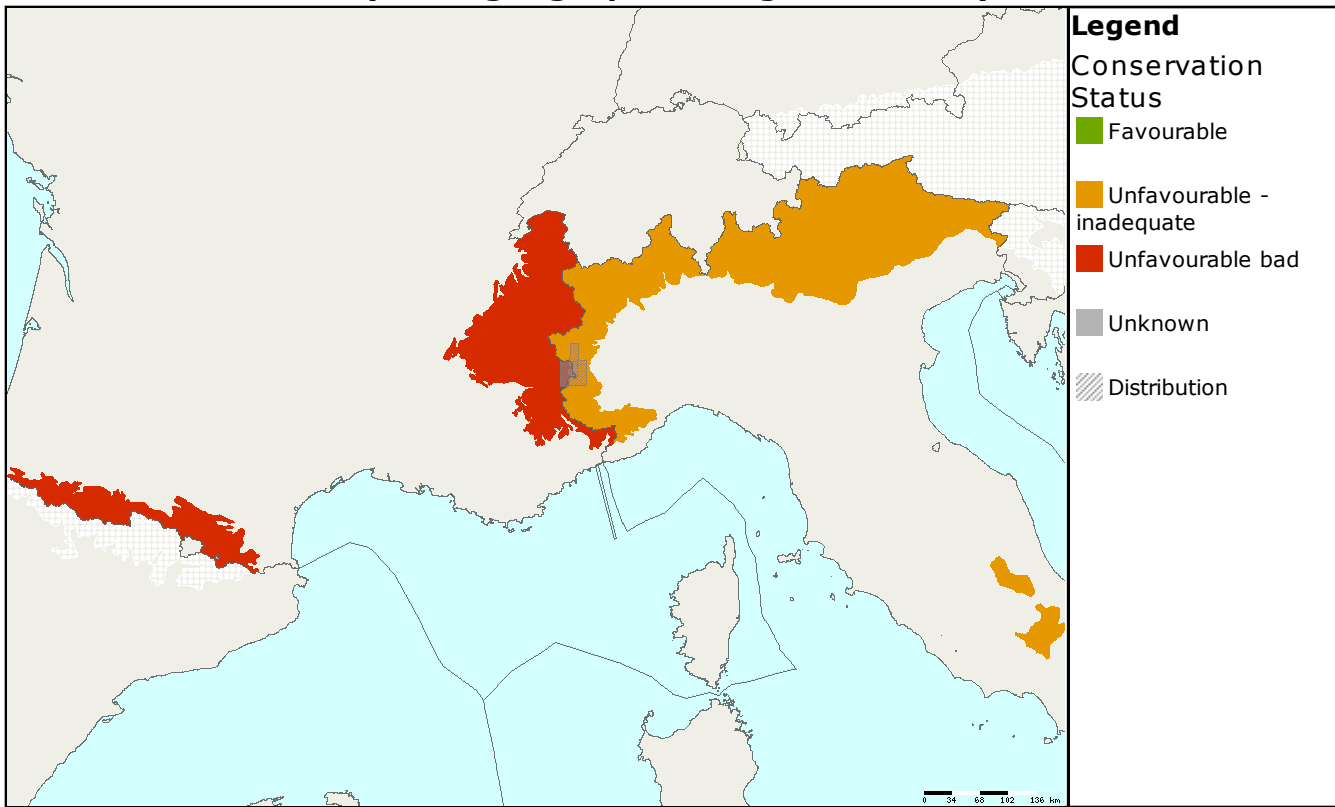

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						13 grids	-

The lanza's alpine salamander occurs only in a very small area of the western Alps on the border of Italy and France and in the northern Pyrenees. It is associated with rocky alpine meadows and scree slopes, often close to small streams, usually above the tree line. Its overall status of conservation is reported as "unfavourable-bad". The species is listed as "Vulnerable" by IUCN because it is known from fewer than five locations.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FR	ALP						31 - 31 x	-	2
IT	ALP						8 - 9 grids	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
