

Species name: **Alosa vistonica**  
Annex: **II, V**

Species group: **Fish**  
Regions: **MED**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED							-

MED: The Greek authorities assessed the conservation status of this endemic Shad as 'unfavourable-inadequate' in the Mediterranean region. This is a freshwater species restricted to the coastal Lake Vistonis. The 2007 IUCN Red List (<http://www.iucnredlist.org/search/details.php/61393/summ>) indicates that the species is undergoing a strong population decline and that several threats are jeopardizing its future survival. Therefore, we conclude that conservation status should be rather 'unfavourable-bad' according to the criteria of the Habitats Directive.

**Assessments of conservation status as reported by Member states  
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
EL	MED						23 - 23 area	-	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
