

Species name: **Chalcalburnus chalcoides**  
Annex: **II**

Species group: **Fish**  
Regions: **ALP CON MED**

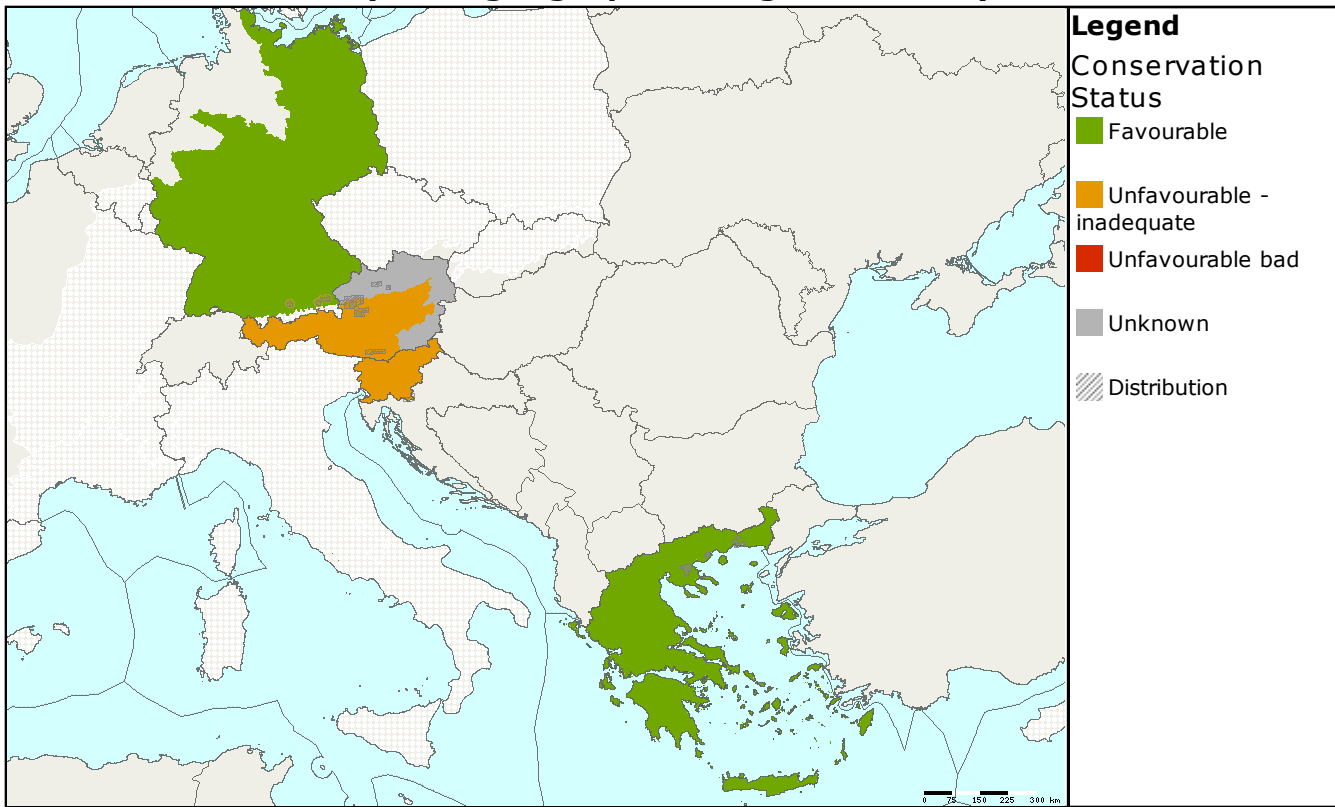

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						> 29 grids	X
EU25	MED						59 - 118 area	=
EU25	CON							

The danube bleak is a fish which is found in Central Europe, the Balkan, Italy and Greece. It has a preference for (brackish) rivers and coastal waters. Of the three geographical regions it occurs in, it is assessed as 'favourable' in the Mediterranean, 'inadequate' in the Alpine and 'unknown' in the Continental region. Particularly in the areas of Greece and Germany it is performing well while important data from Austria are lacking.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
AT	ALP						1000000 - 10000000 x	X	2
SI	ALP						1 - (1) grids	X	2
AT	CON						N/A x	X	3
DE	CON						4 - (4) loc.	=	2
SI	CON						1 - (1) grids	X	2
EL	MED						59 - 118 area	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
