

Species name: **Chondrostoma polylepis**
Annex: **II**

Species group: **Fish**
Regions: **ATL MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

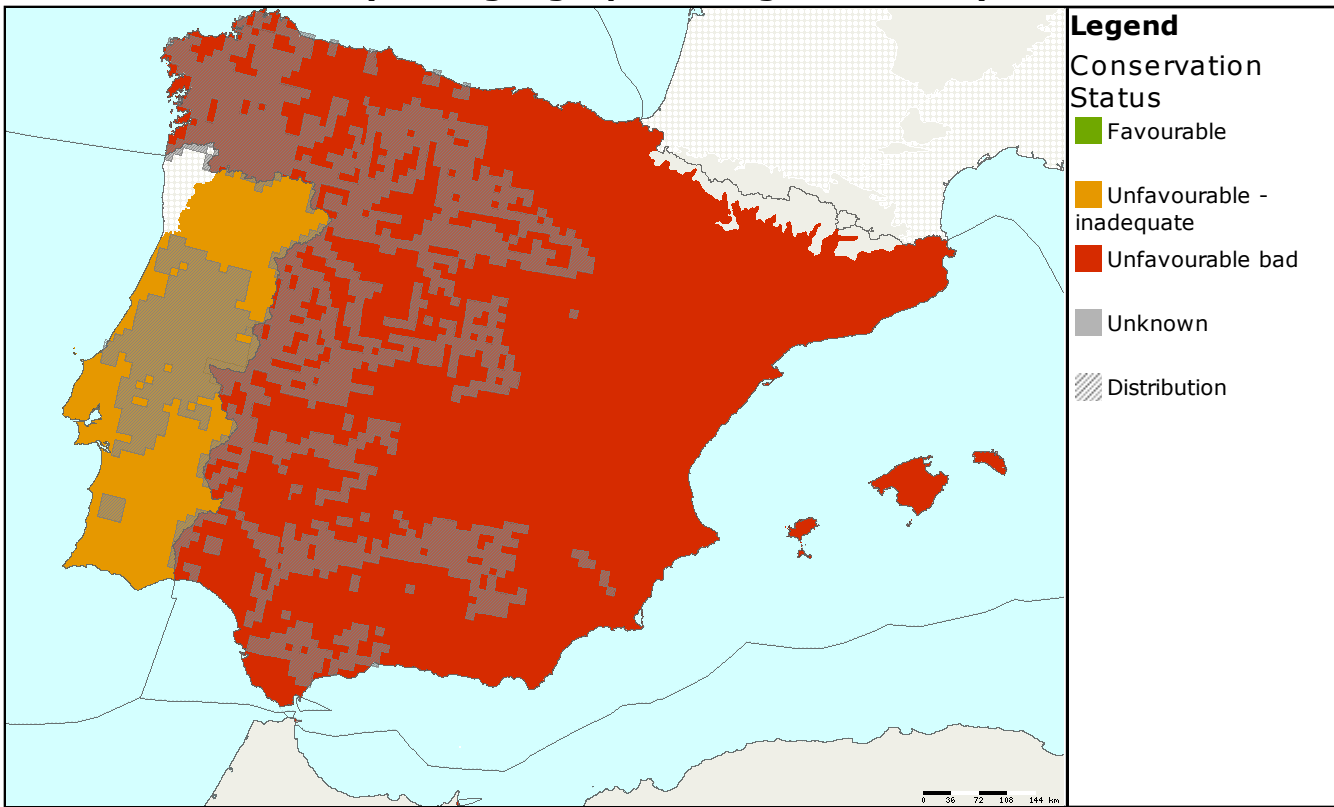

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ATL						220 loc.	=
EU25	MED						1375 grids	

The Iberian Nase is a freshwater fish species endemic to the Iberian Peninsula. It is found in all sections of rivers with a strong stream and occasionally it can be seen in lakes and reservoirs. A subspecies *Chondrostoma polylepis duriense* is evaluated separately.

The conservation status of this abundant and relatively common fish is in both the Atlantic and the Mediterranean biogeographical regions 'unfavourable bad', which is largely due to the assessment of the range in Spain. The information on the reference values or trends which could explain this assessment is not provided. The reports for this species are incomplete. The species is evaluated as 'least concern' in the 2008 IUCN Red List.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	ATL	Unfavourable bad	Unknown	Unknown	Unknown	Unfavourable bad	220 - (220) loc.	=	1
ES	MED	Unfavourable bad	Unknown	Unknown	Unknown	Unfavourable bad	967 - 1009 loc.	N/A	2
PT	MED	Favourable	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	10000 - (10000) indiv.	-	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
