

Species name: **Coregonus albula**
Annex: **V**

Species group: **Fish**
Regions: **ATL BOR CON**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

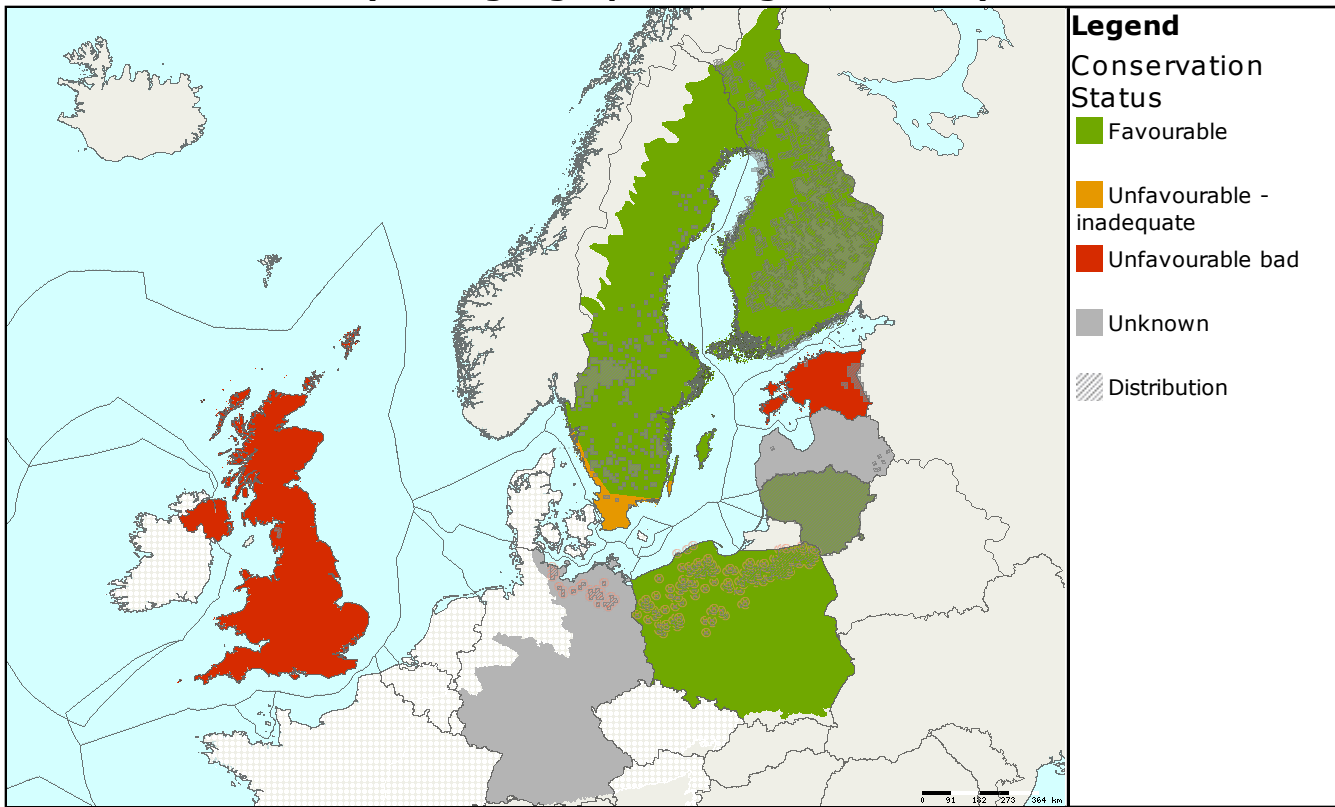

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ATL						1418 - 43601 indiv.	-
EU25	CON						285 grids	
EU25	BOR						2816 grids	

The vendace or white fish occurs in Northern Europe where it inhabits freshwater lakes and rivers. Sometimes it is found in saltwater.

In the Atlantic region the status of this species was assessed as ‘bad’ due to its status in the United Kingdom. In the Boreal and Continental region the status was assessed as ‘favourable’. Data for Denmark and Latvia are deficient. In the United Kingdom it is considered to be regionally extinct. Furthermore no serious threats are known for this species and therefore its IUCN conservation status is ‘Least Concern’.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
UK	ATL						1418 - 43601 indiv.	-	2
EE	BOR						39 - 39 grids	-	1
FI	BOR						650 - 25000 loc.	=	1
LT	BOR						58 - 80 loc.	=	2
LV	BOR						7 - 20 loc.	X	3
SE	BOR						700 - 1100 loc.	=	2
DE	CON						24 - (24) x	X	3
PL	CON						218 - (218) grids	X	3
SE	CON						5 - 7 loc.	=	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
