Assessments of conservation status at the European level (all biogeographical regions - EU25)

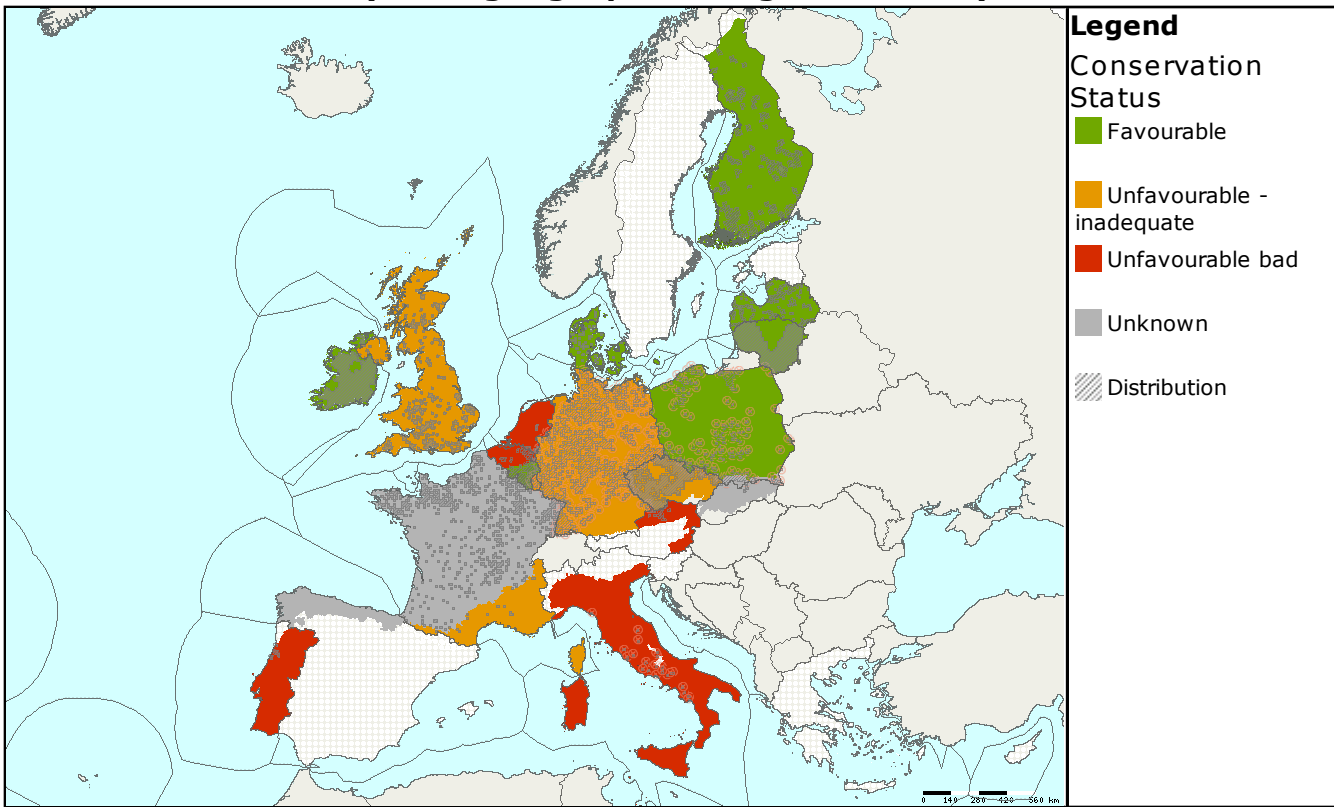

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						90 grids	
EU25	CON						2400 grids	
EU25	MED						47 grids	
EU25	ATL						1691 grids	
EU25	BOR						645 grids	=

The brook lamprey is a fish that is found in nearly all European seas. It occurs in the European part of the Atlantic Ocean, the Mediterranean Sea, the North Sea and the Baltic Sea. It is also found in inland freshwater systems.

In most geographical regions (Alpine, Atlantic and Continental) this species' status was assessed as 'inadequate'. In the Mediterranean region it was assessed as 'bad' and in the Boreal region its status was 'favourable'. There is a huge difference in the species' statuses between the countries. In some countries its status is 'bad', in some 'inadequate' or 'inadequate but improving' and in some it is 'favourable'. Important data from France and Poland are deficient and therefore 'unknown'.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**
