Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						4 loc.	X
EU25	ATL						192 grids	
EU25	MED						865 grids	-

The berme juela is a fish species which is endemic to some river basins in Portugal and Spain. In both the Alpine and Atlantic region this species status has been assessed as ‘unknown’. In the Mediterranean region its status has been assessed as ‘bad’. However, the data from the only two countries this species occurs in, Portugal and Spain, are too deficient to make a proper assessment possible. In order to improve the assessments, more data from Portugal and Spain are required. According to the IUCN the population is declining and its conservation status is ‘Vulnerable’.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	ALP						4 - 4 loc.	X	3
ES	ATL						193 - (193) loc.	N/A	2
PT	ATL						N/A x	-	3
ES	MED						843 - (843) loc.	-	2
PT	MED						10000 - (10000) indiv.	-	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
