

Species name: **Rutilus frisii meidingeri**  
Annex: **II, V**

Species group: **Fish**  
Regions: **ALP CON PAN**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

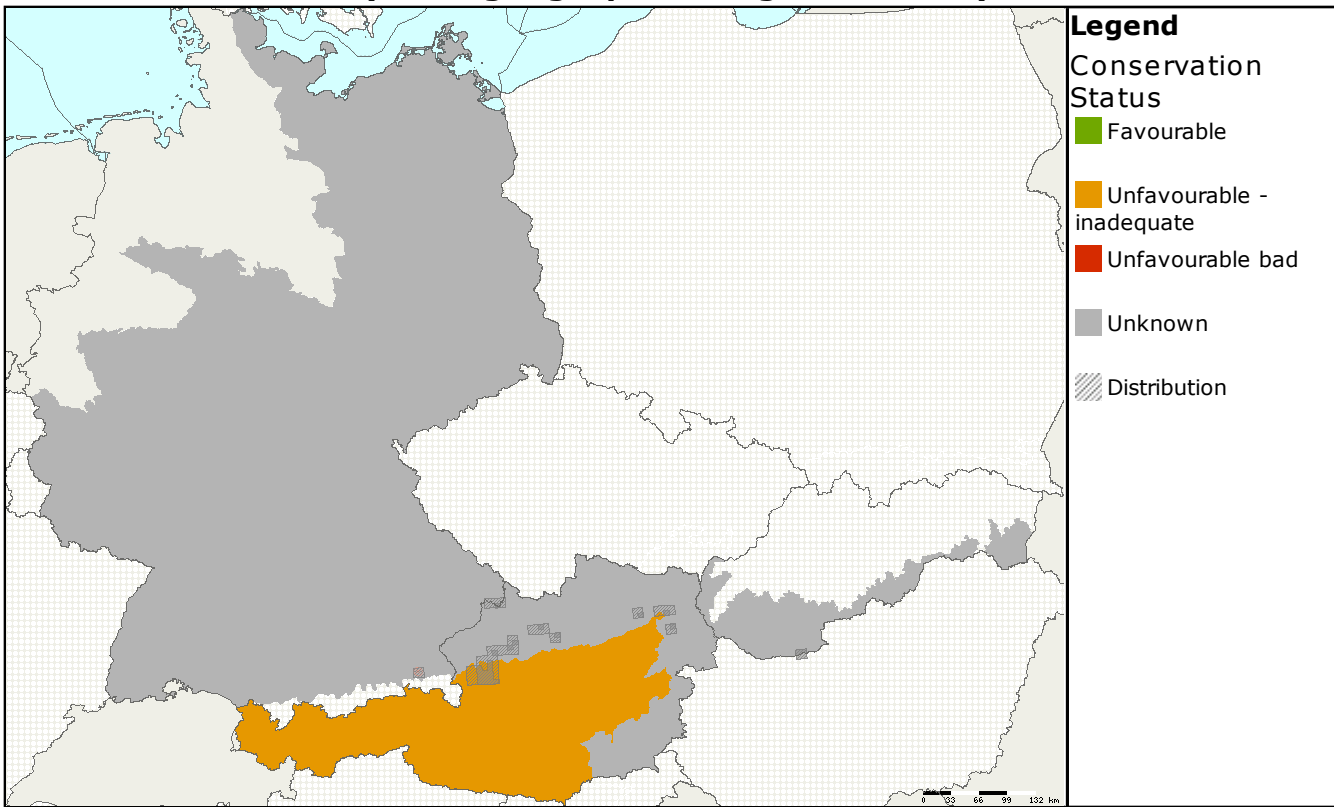

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP							X
EU25	CON						24 grids	X

A freshwater fish species nowadays occurring mainly in subalpine lakes in German and Austrian Alps. Small population is known as well from Austrian section of Danube. It is a lentic species occurring in deep waters of lakes.

The conservation status in the Alpine biogeographical region is 'unfavourable inadequate', the status in the Continental biogeographical region is 'unknown'. In the last decades the species was lost from several localities. It is included in the 2008 IUCN Red List in the category 'vulnerable'.

**Assessments of conservation status as reported by Member states  
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
AT	ALP						10000 - 100000 x	X	2
AT	CON						1000 - 10000 x	X	3
DE	CON						1 - (1) loc.	X	3
SK	PAN						1 - 1 indiv.	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
