The streber is a freshwater fish species distributed in central and south-east Europe. It prefers main courses of small to large rivers, in stretches with strong current. Usually on stone bottom. Threats to this species are dams and pollution.

Species found only in Danube catchment area, in Alpine region as well. It is more common in adjacent Continental and Pannonian regions. Assessed as 'unfavourable-bad' overall. All parameters are 'unfavourable-bad' in Austria due to human impacts. It is 'unfavourable-inadequate' in Slovenia and 'unknown' in Slovakia. For Continental region overall assessment is also 'unfavourable-bad'. However, it is 'unknown' in Germany. In Pannonian region it is more widespread than in other regions. It is assessed as 'unfavourable-inadequate' with mostly 'unknown' parameters. Status is reported as improving in Hungary which hosts most of the population. Better information required overall. According to IUCN species is 'least concern'.
