The Zingel is fish species distributed in central and south-eastern Europe. It lives in large rivers, in fast-flowing waters. Major threats to the species are dams and pollution. It is a Danube catchment area species.

The Alpine region is at the border of its distribution. It is more common in adjacent Continental and Pannonian regions. Overall assessment is 'unfavourable-bad' due to alteration of watercourses. It should be noted that data are poor. In the Continental region more widely distributed than in the Pannonian. It is assessed as 'unfavourable-inadequate' but unknown in Germany and for two parameters in Slovenia. In the Pannonian region also assessed as 'unknown'. Better data required overall. The species was assessed as 'least concern' by IUCN in 2008.
