

Species name: **Anthrenochernes stellae**  
Annex: **II**

Species group: **Invertebrates**  
Regions: **BOR CON**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

| MS   | Region | Conservation status assessment |            |         |                  |         | Population size & unit | Population Trend |
|------|--------|--------------------------------|------------|---------|------------------|---------|------------------------|------------------|
|      |        | Range                          | Population | Habitat | Future prospects | Overall |                        |                  |
| EU25 | BOR    |                                |            |         |                  |         | 42 - 72 loc.           | X                |
| EU25 | CON    |                                |            |         |                  |         | 11 - 21 loc.           |                  |

*Anthrenochernes stellae* inhabits rotten and decaying wood of the deciduous trees in old hollows. The main threats for the species are the removal of dead and dying trees and cutting off dead parts with hollows and cavities from living trees. Its overall status of conservation is "unfavourable-bad" for the two biogeographical regions where it appears, despite in Boreal region Latvian assessment for habitat parameter and Swedish assessment for range parameter are "favourable". Many parameters are reported as "unknown" by the countries, showing better information is required for the species.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

| MS | Region | Conservation status assessment |            |         |                  |         | Size&unit    | Population trend | Data quality |
|----|--------|--------------------------------|------------|---------|------------------|---------|--------------|------------------|--------------|
|    |        | Range                          | Population | Habitat | Future prospects | Overall |              |                  |              |
| LV | BOR    |                                |            |         |                  |         | 2 - 2 loc.   | X                | 3            |
| SE | BOR    |                                |            |         |                  |         | 40 - 70 loc. | X                | 2            |
| CZ | CON    |                                |            |         |                  |         | 2 - 2 loc.   | =                | 3            |
| DE | CON    |                                |            |         |                  |         | 2 - (2) loc. | X                | 1            |
| DK | CON    |                                |            |         |                  |         | 2 - 2 loc.   | X                | 2            |
| SE | CON    |                                |            |         |                  |         | 5 - 15 loc.  | X                | 3            |

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
