

Species name: **Aradus angularis**  
 Annex: **II**

Species group: **Invertebrates**  
 Regions: **BOR**

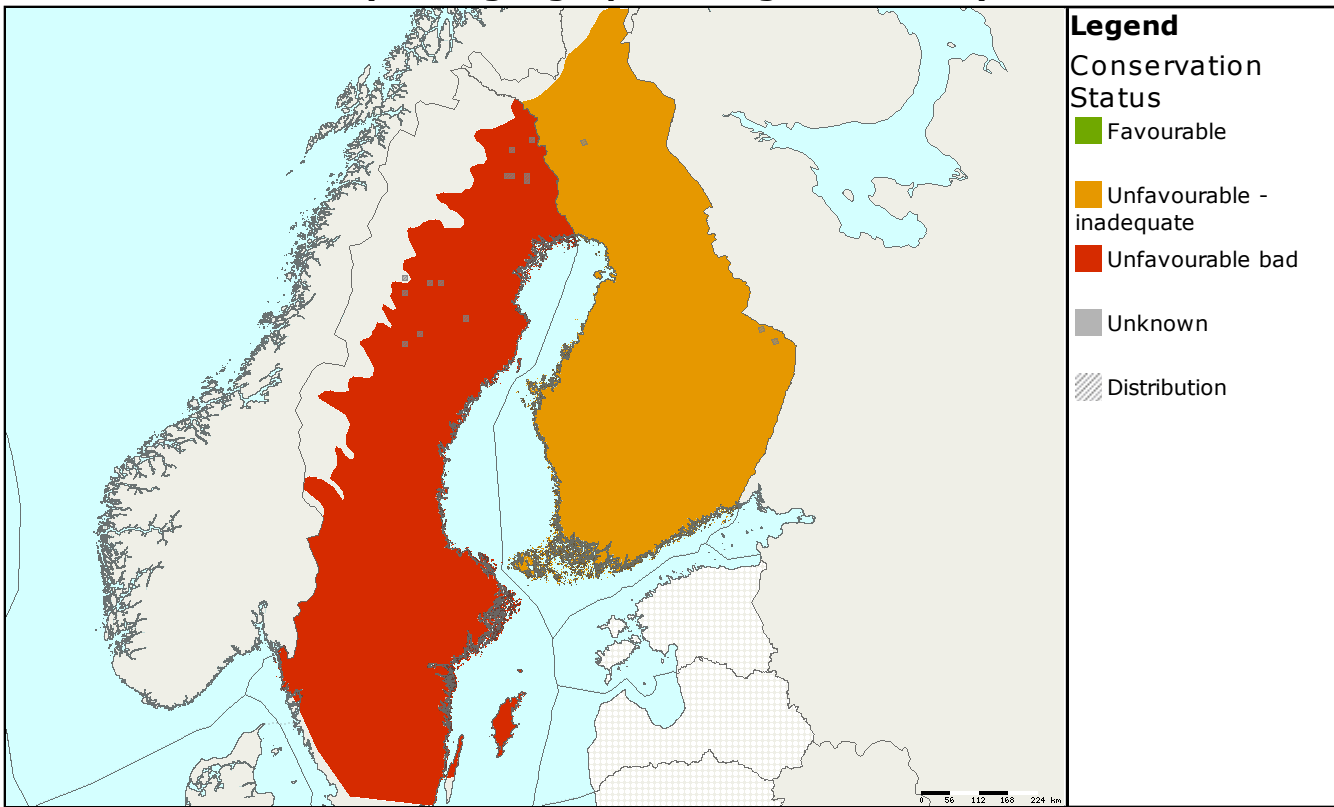

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	BOR						15 grids	

*Aradus angularis* is an insect living under bark of burned coniferous trees and perhaps also on fallen bark pieces. The species can be found at forest fire sites. From the Boreal biogeographical region species is known from Sweden and Finland. The majority of records are from Sweden so the overall assessment equals the Swedish report - 'unfavourable-bad'. Decline in abundance this species in Finland is probably caused by suppression of natural forest fires.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FI	BOR						3 - 10 grids	-	3
SE	BOR						10 - 25 loc.	+	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
