

Species name: **Bolbelasmus unicornis**
Annex: **II, IV**

Species group: **Invertebrates**
Regions: **ALP CON MED PAN**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

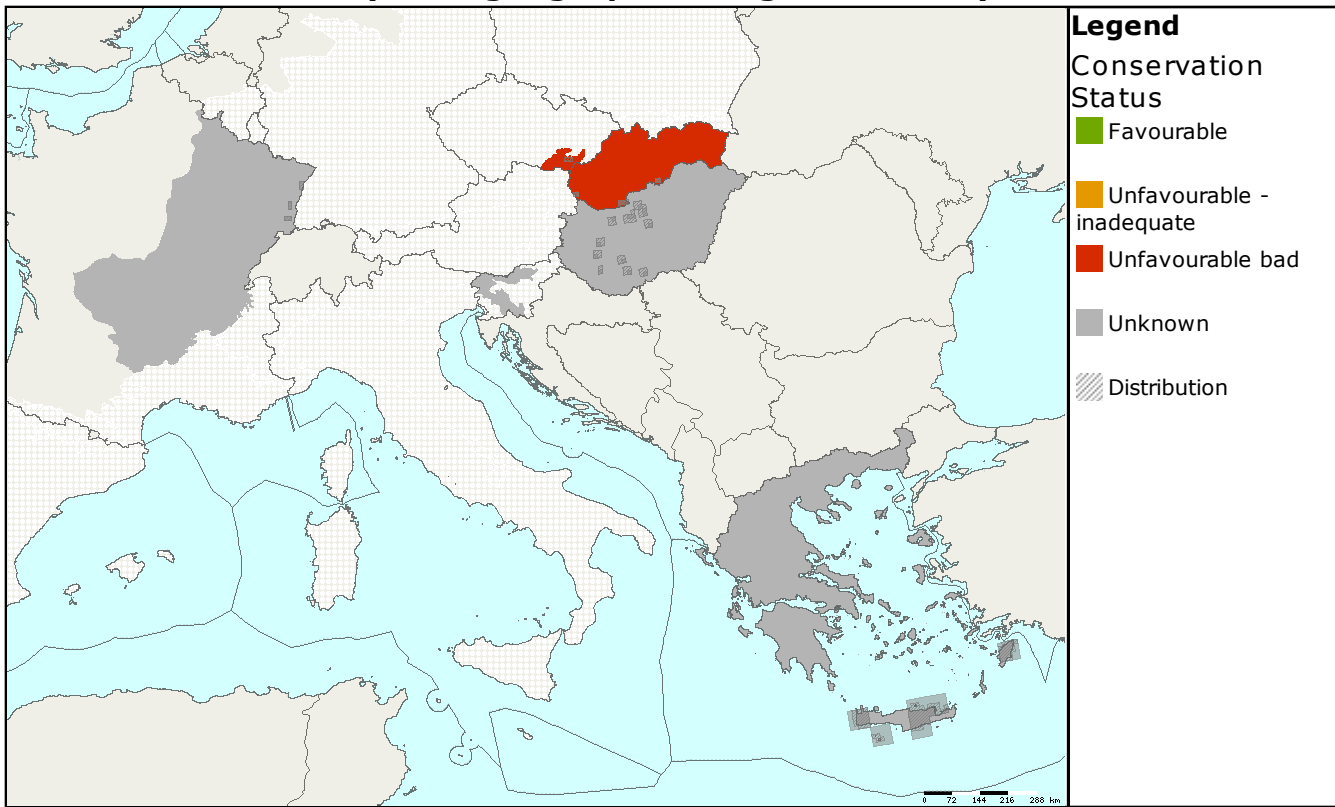

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	CON							X
EU25	MED							X
EU25	PAN						53 grids	
EU25	ALP						>>15 grids	x

Bolbelasmus unicornis is a very rare Pannonic beetle species, declining in the whole area of its occurrence. Its trophy is associated with truffles and other subterranean fungi. Since the species is typical for Pannonian steppes, Alpine region is on the border of its range. Most probably that the Slovak populations are more numerous, thus the overall assessment follows the assessment of Slovakia 'unfavourable-bad'.

From Continental region it is reported only by France. There is no available data and therefore its overall assessment is 'unknown'. The species is recorded in Mediterranean region only by Greece. It was evaluated in all parameters as 'unknown'. Even in Pannonian region very little information is available making the overall assessment 'unknown'.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
SI	ALP						N/A x	X	3
SK	ALP						3 - 15 x	X	3
FR	CON						N/A x	X	3
EL	MED						7 - (7) x	X	2
CZ	PAN						3 - 3 loc.	=	1
HU	PAN						13 - 15 loc.	X	3
SK	PAN						10 - 15 x	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
