

Species name: **Chilostoma banaticum**
Annex: **II, IV**

Species group: **Invertebrates**
Regions: **PAN**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	PAN						15000000 - 17000000 indiv.	+

PAN: *Chilostoma banaticum* is the Carpathian endemic species. It occurs in the area of the East and South Carpathian Mts. In Hungary their marginal populations live. Species used to live in the northern hills of medium altitude in the Pleistocene. Nowadays it reappeared in Hungary again (the upper River-Tisza and the river Koros). Main threats for this species are human activities, flooding and climatic changes. Its habitat has been marked as inadequate and deteriorating (U1-) and overall assessment is "inadequate".

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
HU	PAN						15000000 - 17000000 indiv.	+	2

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
