

Species name: **Erebia calcaria**  
Annex: **II, IV**

Species group: **Invertebrates**  
Regions: **ALP**

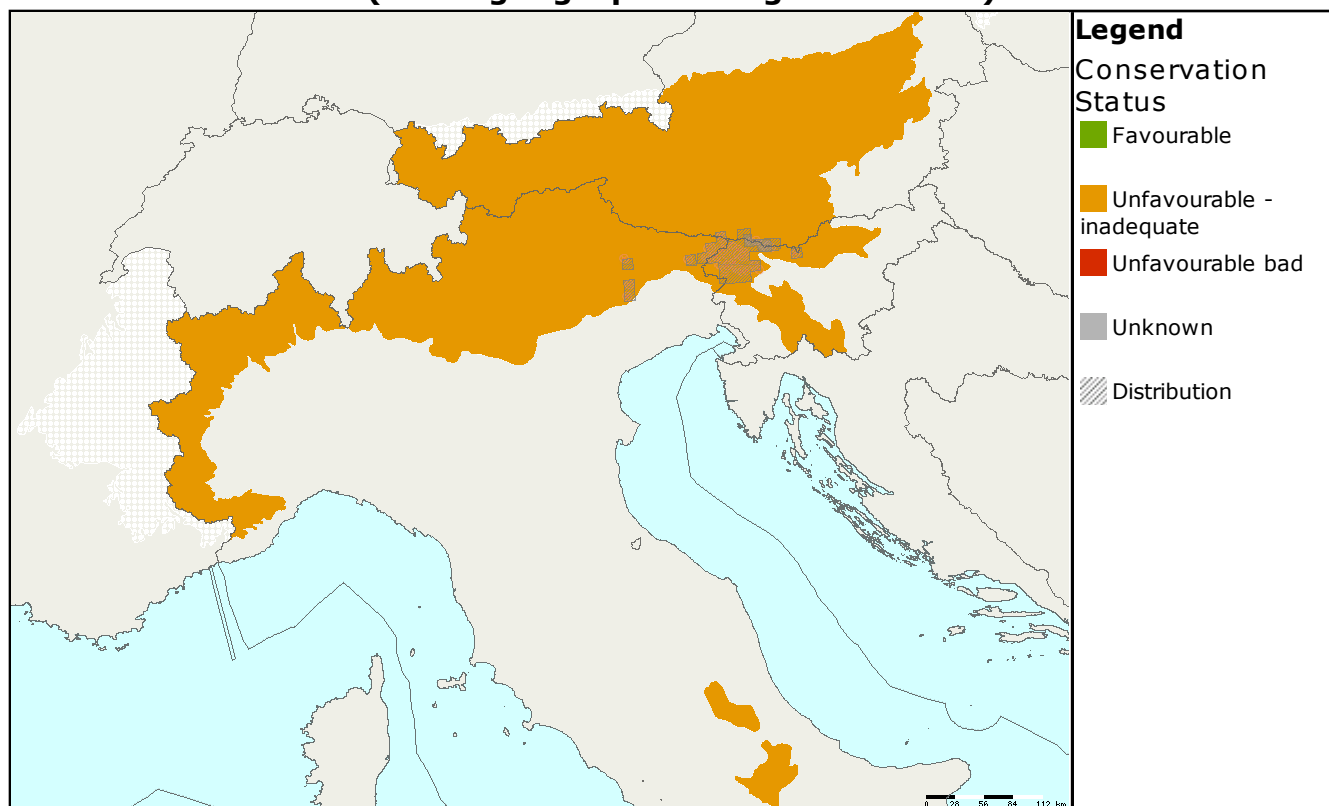

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP	Unfavourable - inadequate	Favourable	Favourable	Favourable	Unfavourable - inadequate	30 grids	=

The Lorkovic's brassy ringlet (*Erebia calcaria*) is a butterfly species endemic to Alps in Europe. The species is reported from Alpine biogeographical region by Austria, Italy and Slovenia. Its overall assessment is 'unfavourable-inadequate', same as in all three countries. However, 'population' and 'habitat' parameters are reported as 'favourable', as well as future prospects in Italy.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
AT	ALP						18 - 18 loc.	=	1
IT	ALP						12 - 12 loc.	=	2
SI	ALP						N/A x	=	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
