

Species name: **Leptodirus hochenwarti**  
 Annex: **II, IV**

Species group: **Invertebrates**  
 Regions: **ALP CON**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						55 loc.	X
EU25	CON						36 - 39 loc.	

A cave beetle known originally only from karst areas in Slovenia. Recently it was described as well from Croatia and Italy.

The conservations status in both the Alpine and the Continental biogeographical regions is 'favourable'. No major threats to the species and its habitat were recorded.

**Assessments of conservation status as reported by Member states  
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
SI	ALP						55 - (55) loc.	X	3
IT	CON						1 - 4 loc.	=	2
SI	CON						35 - (35) loc.	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
