The dusky large blue is widely spread across Europe, in between Spain and France on the west side and Kazakhstan and the Russian Federation on the east side.

In most of the geographical regions (Atlantic, Continental and Mediterranean) this species' overall status is 'bad'. In the Alpine and Pannonian region it is assessed as 'inadequate'. By way of exception in the Alpine region the range and the population are considered as 'favourable'. Spain harbours an important part of this species habitat but the status of the species in this country is largely 'unknown' and therefore a proper assessment of this species' status is not possible. For a long time this species IUCN conservation status was 'Endangered' but since 1996 it is considered as 'Lower Risk/Near Threatened'. It is stated that this needs to be updated.
