

Species name: **Oxyporus mannerheimii**  
 Annex: **II**

Species group: **Invertebrates**  
 Regions: **BOR CON**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	BOR						78 grids	
EU25	CON						2 loc.	X

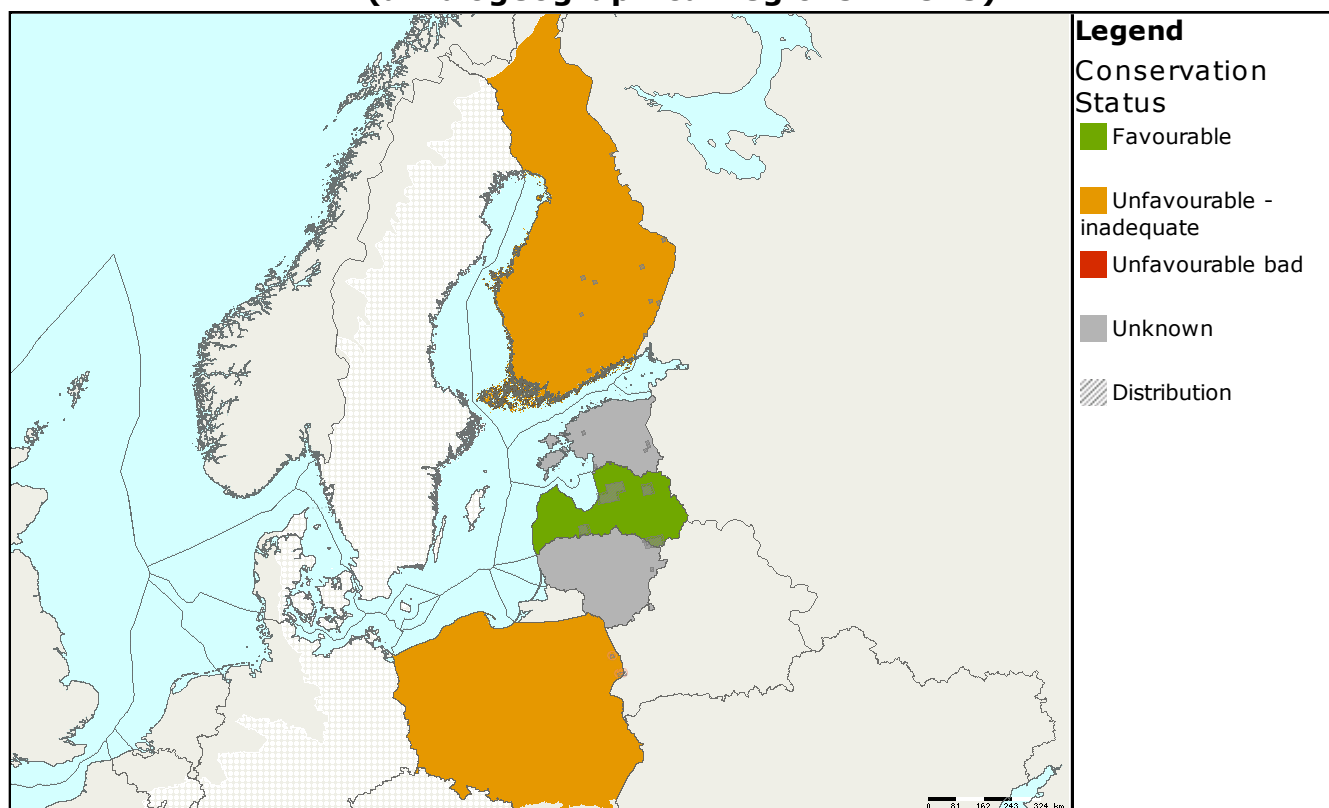

### Oxyporus mannerheimii

A Euro-Siberian species of beetle. Its natural range spreads from the north-western Europe to Siberia. In the northern Europe it is relatively rare. It is a forest species occurring in all deciduous, mixed and coniferous forests. It feeds on mushroom, so it is closely linked to the stands with old trees and dead wood.

The conservation status is 'favourable', but this assessment is influenced by status in Latvia, where the proportion of the distribution area seems to be overestimated. More appropriate assessment would be 'unknown'. The conservation status in the Continental biogeographical region, at the

southern boundary of the distribution of this boreal species, is 'unfavourable inadequate'. The species occurs here only in two localities, what is not sufficient from the long term perspective.

### Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
EE	BOR						5 - 5 colony	+	2
FI	BOR						10 - (10) grids	X	2
LT	BOR						1 - 1 loc.	X	3
LV	BOR						8 - 8 loc.	X	2
PL	CON						2 - 2 loc.	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
