

Species name: **Odontopodisma rubripes**
Annex: **II, IV**

Species group: **Invertebrates**
Regions: **ALP PAN**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

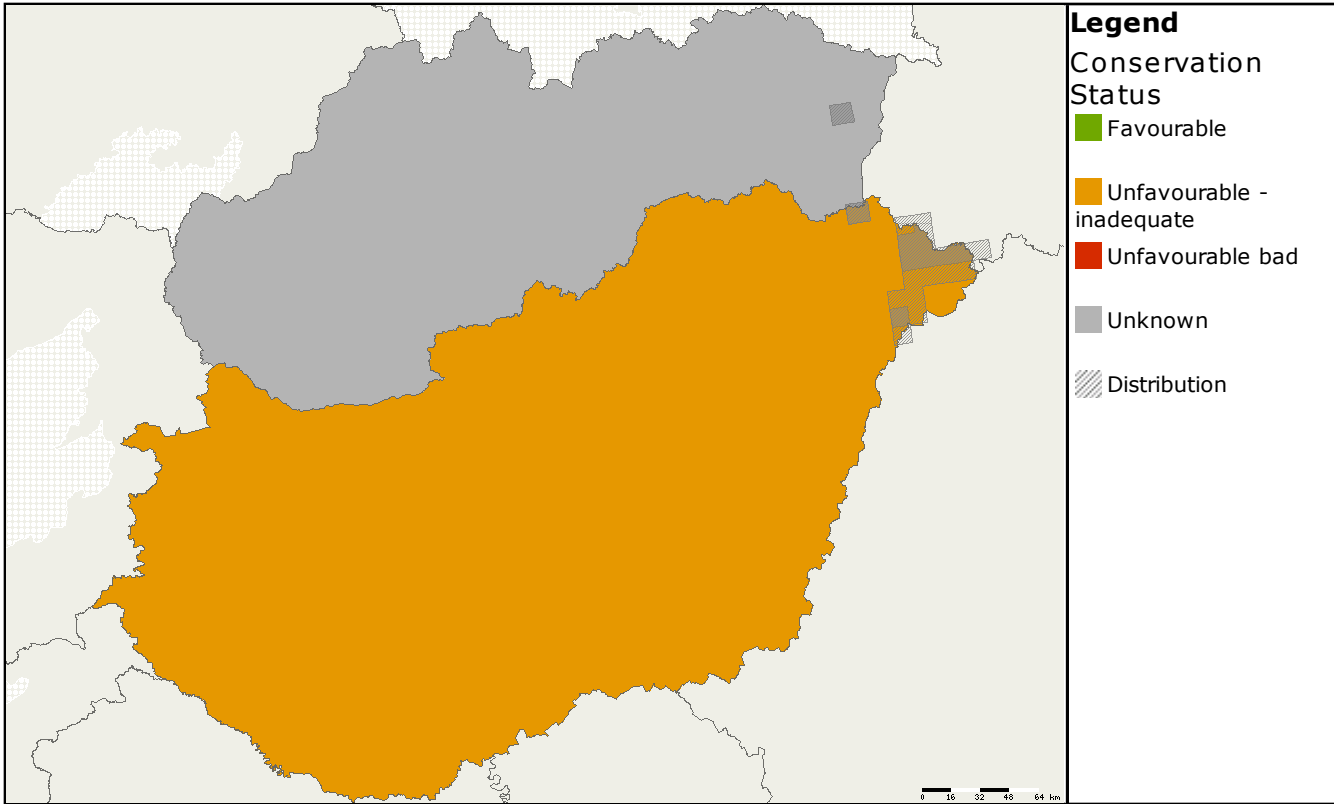

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						2 - 3 loc.	X
EU25	PAN						8 - 15 loc.	

The centre of the distribution of this grasshopper is in the Romanian Carpathians and Transylvania from where the range extends to the neighbouring countries. It occurs in mesophile meadows and bushes mainly in stands with tall dense vegetation.

The conservation status in both the Alpine and the Pannonian biogeographical regions is 'unknown'. However, considering the negative trends and the fact that reported reference values are higher than actual it is possible to conclude, that it is not 'favourable'. The populations in the Hungary and Slovakia represent western margin of the species distribution. The population size is usually limited and the populations are isolated.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
SK	ALP						2 - 3 loc.	X	3
HU	PAN						7 - 10 loc.	-	2
SK	PAN						1 - 5 loc.	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
