

Species name: **Pholidoptera transsylvanica** Species group: **Invertebrates**
 Annex: **II, IV** Regions: **ALP PAN**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

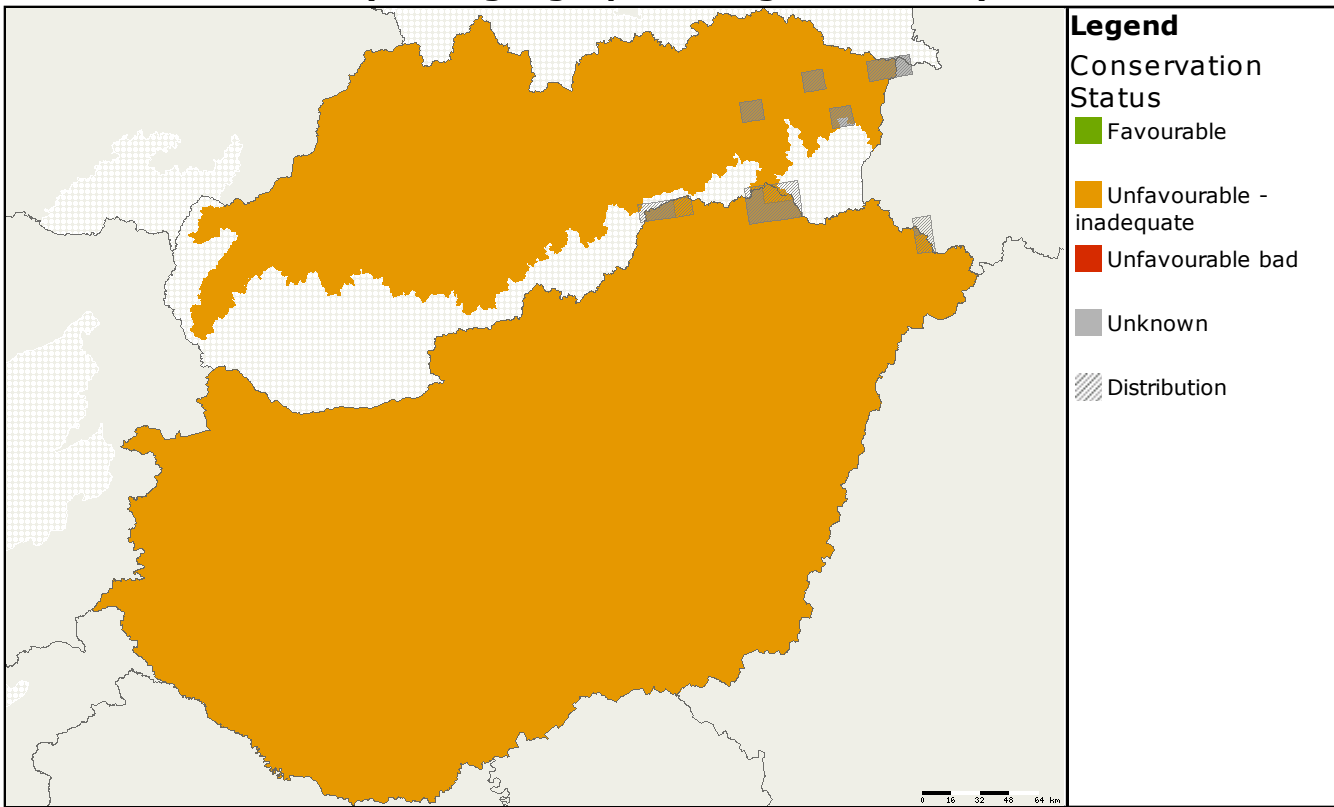

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	5 - 20 loc.	-
EU25	PAN	Favourable	Favourable	Unfavourable - inadequate	Unknown	Unfavourable - inadequate	15 - 20 loc.	+

A brachypterous bush-cricket occurring mainly in the south-eastern Europe. The natural range reaches its northern boarder in Eastern Slovakia and the centre of the distribution lies in the Romanian Carpathians and Transylvania. It is a species of mesophile grasslands, dry shrubs and forest fringes. It occurs on stands with dense and tall vegetation.

The conservation status in both the Alpine and the Pannonian biogeographical regions is 'unfavourable inadequate'. The species occurs in several fragmented populations, the habitat of the species is negatively affected by biocenotic evolution.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
SK	ALP	Orange	Orange	Orange	Orange	Orange	5 - 20 loc.	-	3
HU	PAN	Green	Green	Orange	Grey	Orange	15 - 20 loc.	+	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
