The common dormouse is fairly widespread in Europe, although it is absent from Iberia and south-west France. It inhabits deciduous woodland, favouring forest edges. It can also be found in hedgerows in farmland.
In Alpine region, despite of prevailing 'favourable' values, overall assessment is affected by Slovakian and French report making it unfavourable-inadequate'. The same assessment is in Boreal region with significant differences between the situations in each country. In Atlantic region situation is 'unfavourable-bad'. Overall assessments are 'unknown' in Continental, Mediterranean and Pannonian regions with different situations within countries.
Species is classified as 'least concern' by IUCN.
