

Species name: **Balaenoptera edeni**  
Annex: **IV**

Species group: **Mammals**  
Regions: **MMAC**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

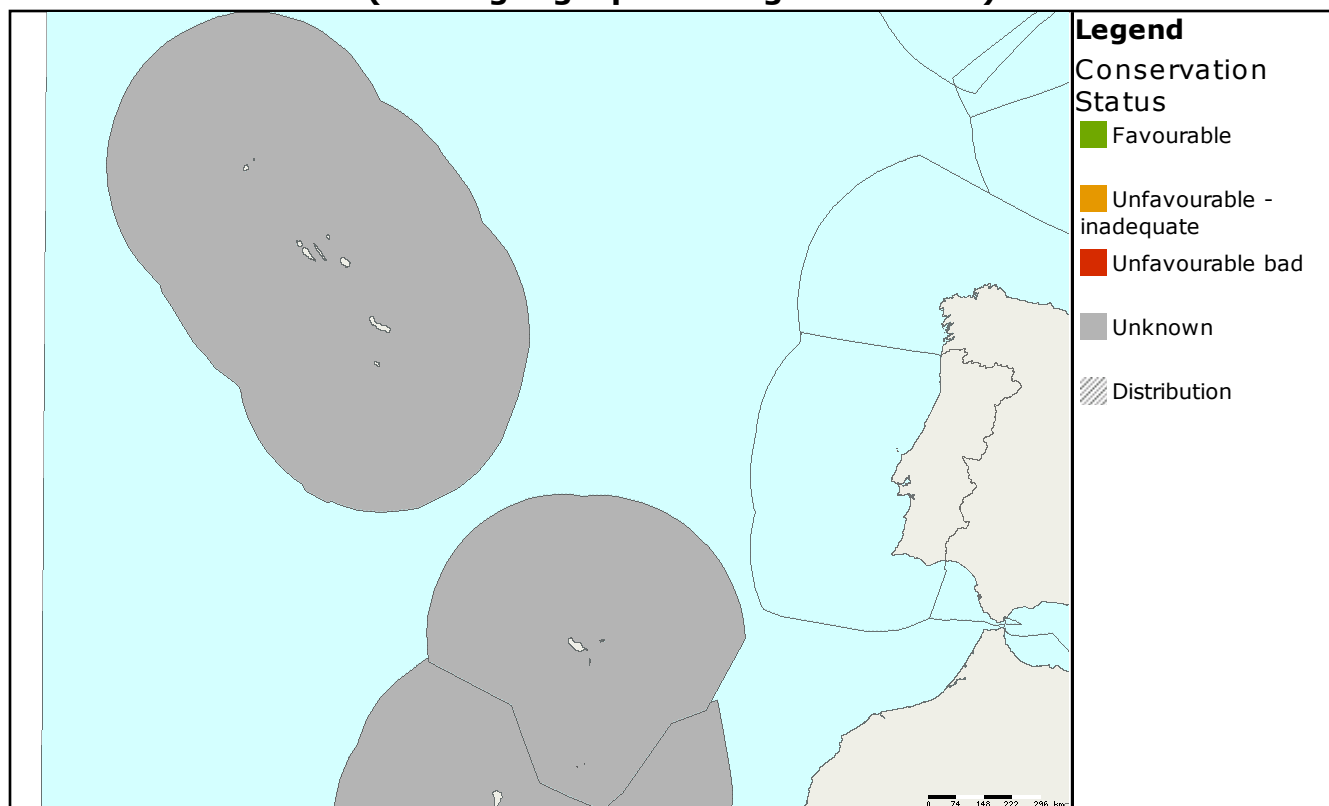

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MMAC						2 N grids	X

The Bryde's whale is present in the Atlantic ocean with a northerly distribution range that is limited by the 40°N latitude. It is observed on a regular basis in the marine Macaronesian region around the Azores and the Canaries islands and it is believed that calving grounds may exist in the marine Macaronesian waters.

The overall assessment in the Macaronesian region is 'unknown' due to the lack of data. The species is listed as 'data deficient' in the IUCN Red List of threatened species due to taxonomical uncertainty on the species' variability.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	MMAC						N/A x	X	
PT	MMAC						N/A x	X	

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
