

Species name: **Plecotus kolombatovici**  
Annex: **IV**

Species group: **Mammals**  
Regions: **MED**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

**Legend**  
Conservation Status

- Favourable
- Unfavourable - inadequate
- Unfavourable bad
- Unknown

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED							X

MED: Species is distributed in mainland Greece from low elevations up to mountain altitudes. Further investigations are needed to complete the missing data. Species was recorded as well in Cyprus, where according to the FFEO, the local NGO it is in 'unfavourable bad' conservation status. Cyprus did not report for this species. However the occurrence of the species on the island was confirmed only recently.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
EL	MED						21 - 21 x	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
