The pigmy pipistrelle is a bat species widely distributed in Europe. It hunts around woodland and wetlands and it is related to water. It often nests in buildings. ALP: Using the agreed method leads to assessment as unknown. It is described as a species recently and it is still poorly known.

Five out of six regional assessments are 'unknown' (Alpine, Atlantic, Continental, Pannonian and Mediterranean). For the remaining Boreal region overall assessment is 'favorable'. More information is needed for the whole range. It is assessed as 'least concern' species by IUCN.
