Assessments of conservation status at the European level (all biogeographical regions - EU25)

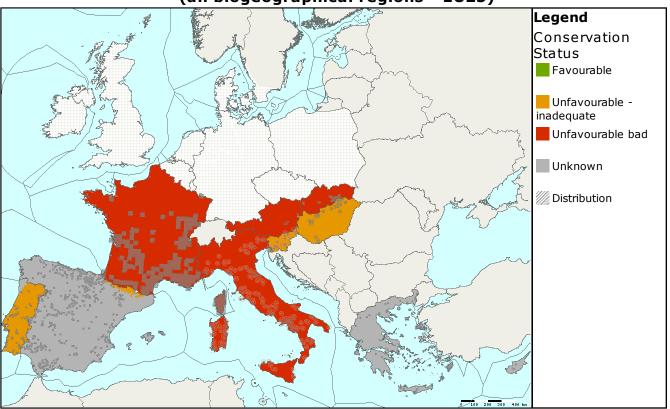

MS	Region	С	onservation	status	Population	Population		
		Range	Population	Habitat	Future prospects	Overall	Population size & unit	Trend
EU25	ALP						251 grids	
EU25	ATL						588 grids	
EU25	CON						541 grids	
EU25	MED						> 1319 grids	
EU 25	PAN						7000 - 10000 indiv.	

The common bentwing bat (also known as Schreiber's bent-winged bat, Schreiber's long-fingered bat) is widely spread in Europe.

Of some geographical regions data is lacking and therefore its status is largely unknown or partly recorded as 'unfavourable-bad' (Atlantic and Mediterranean region). However, its status is properly assessed in the Alpine and Continental region where it is stated as 'bad'. In the Pannonian region its status is negative, with Hungary as the exception wherefore particularly the future prospects were evaluated as good. Major threats to this species are forestry management and mountain tourism. The IUCN conservation status has recently changed from 'Least Concern' to 'Near Threatened'.
