

Species name: **Adenophora lilifolia**
Annex: **II, IV**

Species group: **Plants**
Regions: **ALP CON PAN**

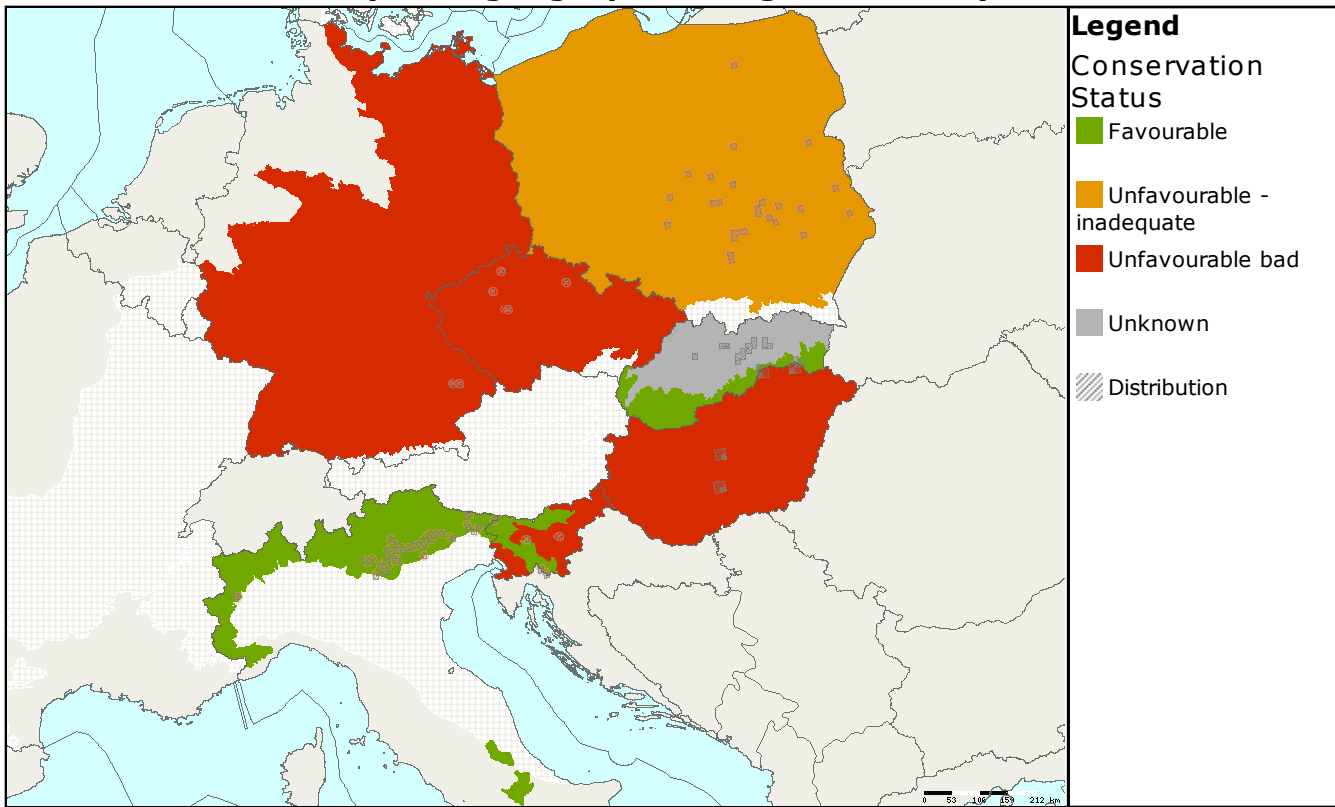

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						51 grids	=
EU25	PAN						19 grids	=
EU25	CON						34 grids	

The lily leaf ladybell (*Adenophora lilifolia*) is a plant species which occurs in many Central and Eastern European countries, as well as in some Asian countries. It has a preference for sunny spots on slightly nutrient rich, not too wet soils. The status of this species in the Alpine region was assessed as ‘unknown’ due to incomplete data from Slovakia. However, the two other countries within this region, Italy and Slovenia, report a ‘favourable’ status for this species. In the Continental and Pannonic regions the status of this species was assessed as ‘unfavourable-bad’. This species is threatened by overgrowth from shrubby vegetation and by inappropriate forest management.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
IT	ALP						44 - 44 loc.	=	2
SI	ALP						2 - (2) x	=	3
SK	ALP						30 - 40 loc.	=	2
CZ	CON						400 - 550 indiv.	=	1
DE	CON						2 - (2) loc.	+	1
PL	CON						1000 - 1500 indiv.	-	3
SI	CON						1 - (1) x	-	3
HU	PAN						180 - 180 indiv.	=	1
SK	PAN						1 - 1 loc.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
