

Species name: **Androsace cylindrica**
Annex: **IV**

Species group: **Plants**
Regions: **ALP**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						24 loc.	

Androsace cylindrical is a flowering plant reported from the Pyrenees (Alpine region) by France and Spain. The species occupies fissures in limestone. Threatened by rock climbing and speleology. The overall assessment is affected by a high number of unknown values in Spain, so the final result is 'unknown'. Report from France is 'favourable'.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	ALP						12 - (12) loc.	N/A	
FR	ALP						12 - 12 loc.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
