

Species name: **Androsace pyrenaica**
Annex: **II, IV**

Species group: **Plants**
Regions: **ALP**

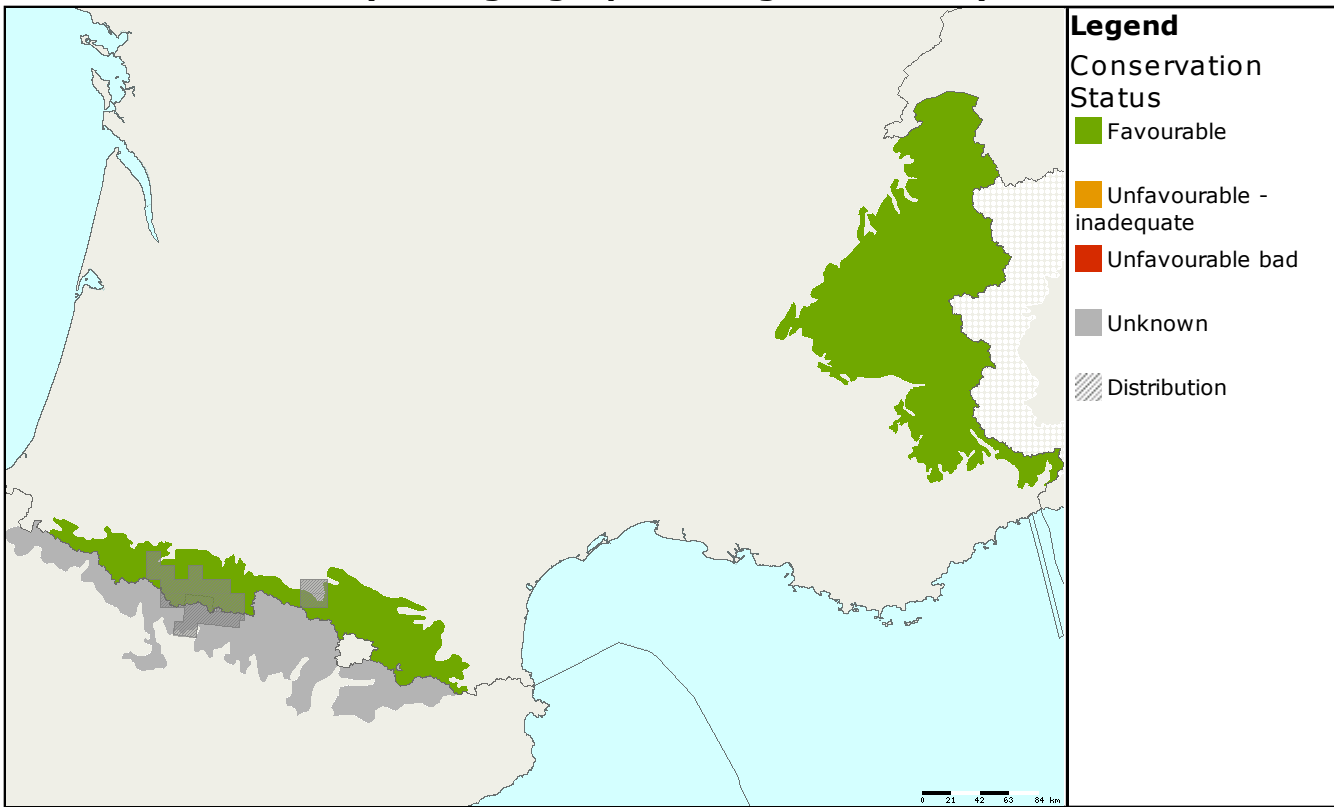

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						28 grids	

Androsace pyrenaica is a flowering plant reported from the Pyrenees (Alpine region) by France and Spain. The species occupies fissures in silicate rocks in high altitudes (from 1700m up to 3000m). The overall assessment is affected by a high number of unknown values, so the final result is 'unknown'. Report from France is 'favourable'.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	ALP						11151 - (11151) indiv.	N/A	1
FR	ALP						15 - 15 loc.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
