

Species name: **Artemisia campestris ssp. bottnica** Species group: **Plants**
 Annex: **II, IV** Regions: **BOR**

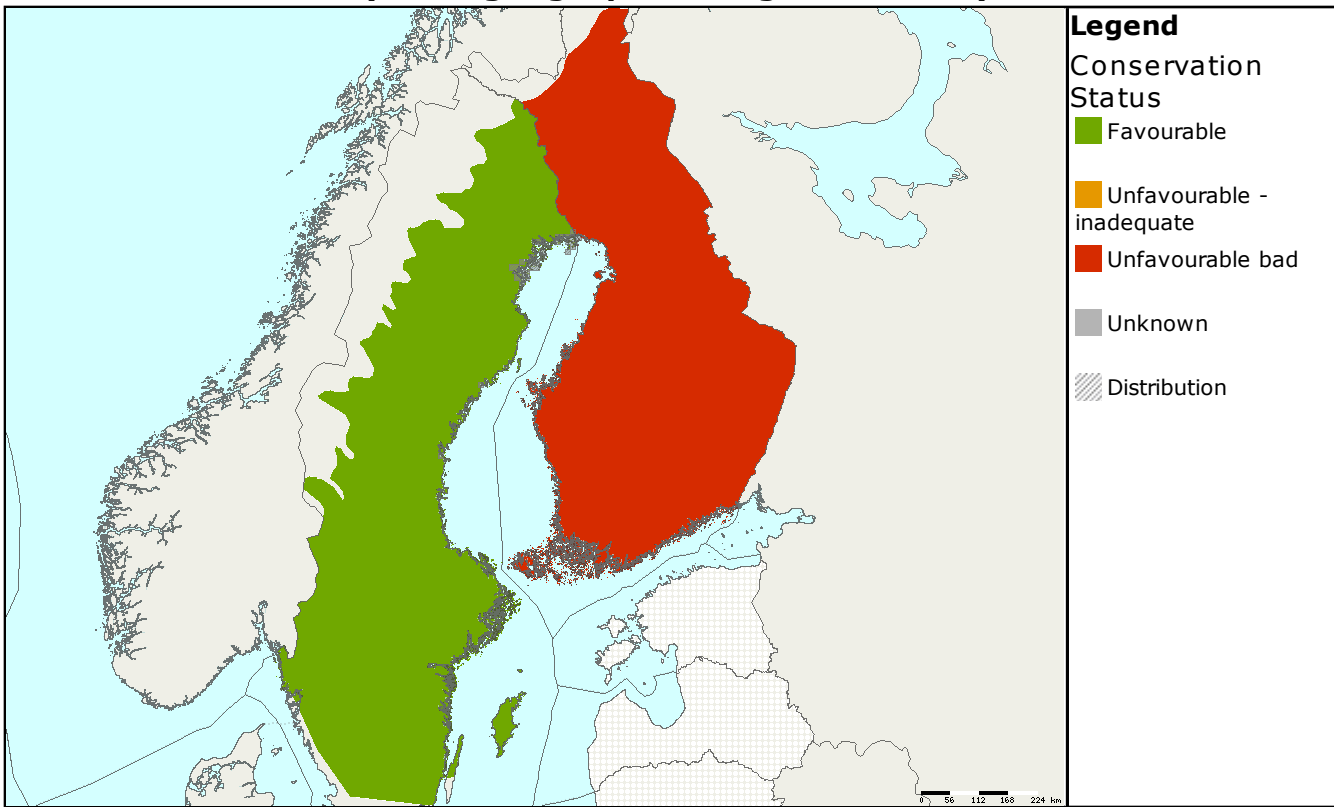

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	BOR						31 grids	=

Artemisia campestris ssp. Bottnica is endemic species for Bottnic bay area with main distribution in Sweden. It is rarer in Finland. Sweden reported 'favourable' status for all parameters so the overall assessment is the same. Finnish report is 'unfavourable - bad' for all parameters but has a minor influence to overall assessment.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FI	BOR						1700 - (1700) tuffs	=	1
SE	BOR						20000 - 20000 indiv.	=	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
