

Species name: **Artemisia genipi**  
Annex: **V**

Species group: **Plants**  
Regions: **ALP CON MED**

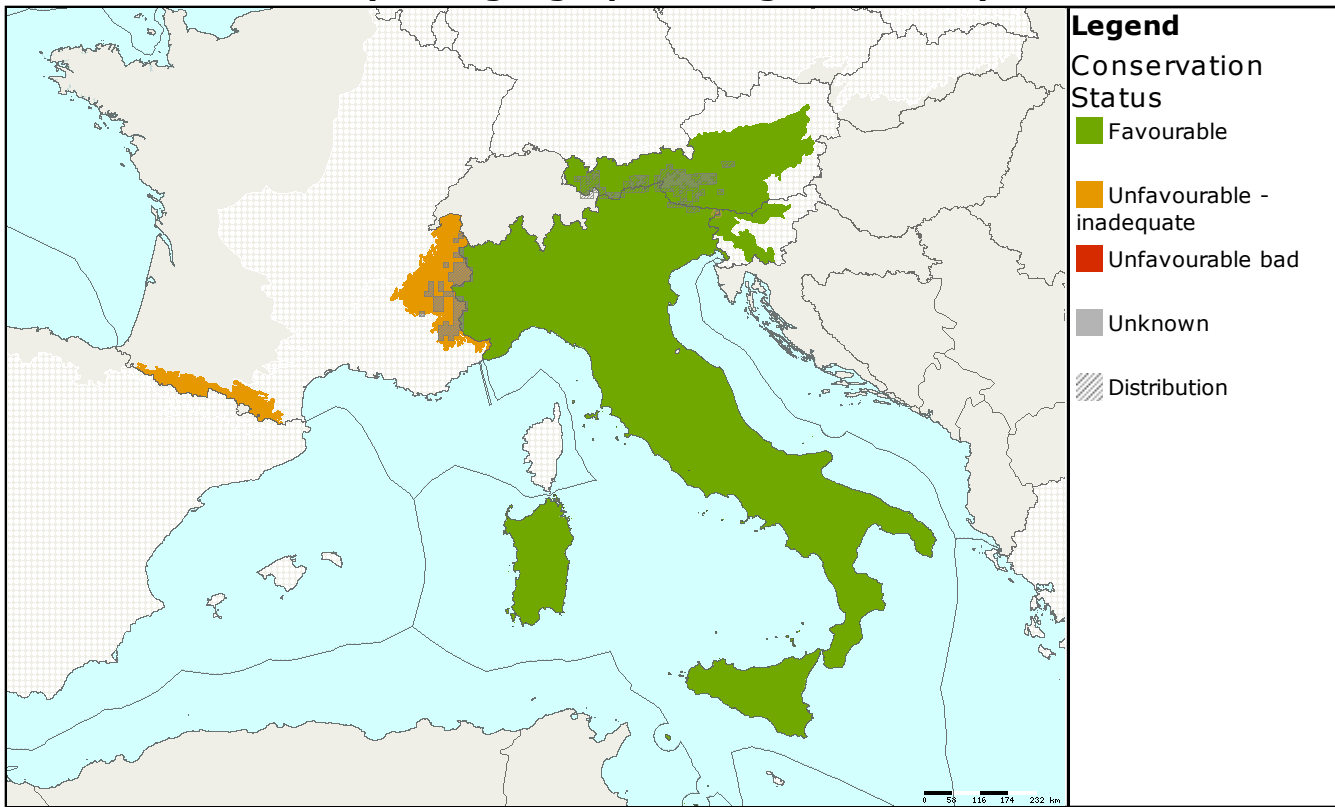

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP	Green	Green	Grey	Orange	Green	> 176 grids	=
EU25	CON	Green	Green	Grey	Green	Green		=
EU25	MED	Green	Green	Grey	Green	Green		=

The black wormwood (*Artemisia genipi*) is a plant species occurring in mountain areas. The species is distributed in 4 countries of the Alpine region. Both range and population were assessed by all countries as 'favourable'. Habitat was assessed as 'unknown' by Italy and future prospects as 'unfavourable - inadequate' by France. Due to lower impact of French report (under 25% thresholds), the overall assessment is still 'favourable'. Reported only by Italy in Continental and Mediterranean regions. Status of most parameters is 'favourable' except for habitat ('unknown'). It leads to 'favourable' overall conclusion.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
AT	ALP						100000 - 1000000 indiv.	=	3
FR	ALP						347 - 347 x	=	1
IT	ALP						N/A x	=	
SI	ALP						1 - 1 grids	=	1
IT	CON						N/A x	=	
IT	MED						N/A x	=	

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
